Thread: [SQL MAP - Desktop Shortcuts](#)

Tyler777 - July 10, 2019, 2:42 pm

I have been doing allot of pen testing for websites using SQL map and I made a shortcut that automatically opens the shell and runs initial bootup code so you can skip some arduous steps

SQLMap - Wizzard Start

SQLMap - Shell Start

Just make a shortcut and match yours to my screenshots

Congrats. Now learn Linux.

It's really not hard to remember & type:

Code python sqlmap.py --random-agent -U "https://foo.com/?id=*" --dbs
Or the 'wizard' if you want that...

Or the 'wizard' if you want that... I know how to use nix, I am not new to coding or hacking, I just made these shortcuts because I was getting tired of my keyboard fucking up when I was typing really fast thing is shorting out on this laptop! but on a real note this is just an EASE of USE item for people using python or specifically sqlmap because this method applies to any python tool.
