Looking to get back into legit cheating. Haven't played in a long time. What currently are the best legit cheats already got aimware.

aimware is okay, there are others but if you do want backtracking/decent chams aimware is good for that. If you have skeet i'd say don't use that. Since there is a bug with it rn. Fanta is okay for legit too but its detection history is iffy.

Satan5 or Blacksector

VER\$ACE, it's the most advanced cheat out there. Owner has way too much money and has got it white-listed on every anti-cheat.

VER\$ACE is #1 so far, IMO the greatest cheat ever created, if we ever meet aliens it will be aliens who want to see the hype around VER\$ACE.

You also shouldn't take advice from egotistical retards who think they're funny when they post.

I'd avoid that. It's pretty bad imo and that's why nobody uses it.

+10 just look at the whole CS forum, you have people like int who literally -3 rep (I think 3 ppl in this thread alone?) everyone that doesn't agree that his "private cheat" is the greatest thing to touch the internet - a f*cking CHEAT in a VIDEOGAME - (in fact, Dylan and int both have given me a -3 rep simply because I didn't praise onetap, and then because I told int the same thing that everyone else tells him.

It's honestly just depressing to see how absolutely toxic and ridiculous this section has become, to the point where you have certain people in here think so highly of themselves that they think "Ha, I got him, -3 rep for you!" because they use certain cheats in Counterstrike. It's depressing to see how some of you live your lives.

For those of you that DO NOT contribute garbage on a daily basis, thank you very much, although the toxicity still overpowers anything good.
