Thread: [Column count doesn't match value count at row 1 \[SOLVED\]](#)

Effexion - July 11, 2019, 8:51 am

I am trying to make an app to help me trackk my tarantulas. I am getting the following error:

Quote:Column count doesn't match value count at row 1

I know this obviously means that I am trying to pass too many values into too few columns but I have counted, and recounted and no joy. My "id" column is AI so that shouldn't even come into play here.

PHP Code

```
<?php
function create(){
    global $connection;
    $genus = $_POST['genus'];
    $species = $_POST['species'];
    $lstFed = $_POST['lastFed'];
    $lstHouse = $_POST['rehousedOn'];
    $lstMolt = $_POST['lastMolt'];
    $temper = $_POST['temper'];
    $lstSub = $_POST['lstSub'];
    $query = "INSERT INTO spiders(genus, species, lastfed, lastrehouse, lastsub, temper, molt)";
    $query .= "VALUES ('$genus', '$species', '$lstFed', '$lstHouse', '$lstSub,' '$temper', ";
    $query .= "'$lstMolt')";

    $result = mysqli_query($connection, $query);
    if(!$result){
        die("<h1>FAILED TO ADD VALUE</h1>" . mysqli_error($connection));
    }
    else{
        echo "<h1>SPIDER ADDED TO THE DATABASE</h1>";
    }
}
?>
```

Could you show value of query before you try to execute it, it would make debugging easier.

At the risk of sounding like an idiot...what do you mean?
