Thread: [Learning Machine Learning in Python](#)

Constantine - July 11, 2019, 11:46 am

Hey All!

I'm looking for some exercises in Machine Learning python because my brain went pure derp trying to think of things to do.

I'm pretty new to python but i know other languages (C#, Javascript) but i want to delve deeper in machine learning because it's really amazing to think you could create a thinking machine and i would need some help thinking of projects that would better my understanding of machine learning and create some awesome AI.

Thanks in advance for your help!

I haven't really got around to looking into much machine learning, however, [sentdex](#) has some videos around machine learning which you may find interesting.

In terms of projects I found this on [Github](#).

Sentiment analysis classifiers are a good place to start.

I suggest these two books

Introduction to machine learning by Ethem Alpaydin 2014

and

Data mining: concepts and techniques by Jiawei Han; Micheline Kamber; Jian Pei; ProQuest

EatingBeef - July 13, 2019, 10:22 am

Simply google it....

10 minutes search and I found this:
