Thread: [How do these profiles exists?](#)

judy hampton - July 13, 2019, 7:27 am

Hello, as of lately I have been looking at the instagram for my business and I am completely new to all this.

Before starting with anything I decided to look at the few business accounts to see how they do it and I see a lot of pictures that are not theirs. How can diifferent IG profiles post same pictures without any copyright permission and still be there (some have over 5m followers)?

Because I dont have any photos for my business I found a ton of cool photos on pinterest but I dont want to get into copyright problems.

There are various ways of stripping photos and cropping them to remove any trademark information.

Hey, thanks for the reply. I didnt mean just removing the copyright watermark, even the pictures without any watermark belong to someone else and cant be just used by everyone, thats what I would like to know :)
