Thread: [Most realistic hacking scene I've ever seen](#)

debian - July 15, 2019, 7:40 am

This scene from Castle really captures the fine details of hacking. Surprisingly accurate

[Video: <https://www.youtube.com/watch?v=K7Hn1rPQouU>]

Gazo - July 15, 2019, 7:45 am

There is nothing more realistic than the "Hack the Gibson" scene in the movie "Hackers"

[Video: <https://www.youtube.com/watch?v=Bmz67ErIRa4>]

?

Joel - July 15, 2019, 7:45 am

Think this is the 10th time this has been posted here.

?

im sorry maybe u havent watched the scene in the video posted where the guy attempts to launch a counterstrike and cat gifs start popping up otherwise u wouldve been quiet and said "damn ok thats the most realistic scene" so WATCH THE VIDEO before posting!

Mr. Robot - July 15, 2019, 7:49 am

>> Someone synced a rat to one of my servers.
Can happen.

>>Monitoring a pivot through firewalls with a graphical interface
Can happen.

>>Hasn't found us yet, just found the outer layer of our system.
Can happen.

>>Intrusion detection to find out who the rat is
Yeah just look at where it's connecting out to and analyze its code to try identify signatures

>>Alerting them that their IP is being tracked.
Yeah just setup a proxy IP that alerts you when it's pinged. Then you get the alert and know someone is looking into your connection.

>>Can you stop it - No.
Well yeah, once they see where the IP is heading to (the proxy address) they can see where that proxy pings back to from there.

>>But I can slow him down.

Yeah, just quickly change proxy or point it elsewhere on the chain to disrupt the callback.

>>It's coming from inside the city, narrowing it down.

Yeah they can triangulate if using cellular network or contact ISP for location. The way he's doing is weird af though so first real discrepancy that's hardcore far fetched there.

>> Cat videos

Well counterstrike could be a program once you have access to load a bunch of these.

>>Blink boxes /firewalls.

Well each could be protected and need the right code to bypass - completely plausible.

Honestly overall the most implausible part of this is just having the graphical interfaces for access but I mean, they could have organized this a while ago lmao or created some program that will automatically scan and add each 'firewall' and organize it nicely.

Clearly you can't, otherwise you would not be this retarded

?

i bet you think your some top notch HF hekker since you have the attention of every 5 y/o around here with your hekkering tutorials lmaoo

just cope with the facts bro, you never actually owned anything in real life

Point - July 15, 2019, 8:12 am

So what is the name of this movie? never seen it

lmao imagine being so butthurt about being a skid you have to go neg rep me ?

thx for the good laugh hahaha

I like how you arent countering my argument simply since you know its true ?
at least you are being honest i mean

I mean what do you want me to do - post some shit like my reported bounties? Link my CVE publisher account?

There's literally no reason to argue with you. Makes no difference to the outcome of the conversation.

yea bro show me all those XSS vulns you have found bro,

damn CVEs? In random PHP libraries no one uses? In wordpress plugins no one uses?
Sure sure full send my bruddha

lmk when you put on the big boy pants can do binary exploitation

then we will talk once the pacifier is out of your mouth ?
