immunity canvas 7.3 vulnerability scanner and exploit tool comes with bluekeep exploit
if anyone have this version with or without crack please share
or even have pro version

CyberStrike - July 24, 2019, 11:04 pm

I doubt that everyone here goes out and spends what 30 grand or so on tools and especially when buying a code signing certificate seems to be a real pain in the wallet. There are PoCs of bluekeep which you probably can weaponize, I would suggest you setup VMs and start that exploit development, it's free and will teach you more than trying to find a piece of software which has an exploit you are looking for meanwhile lots of other exploits or tools are not being used.

I have an old and clean version of CANVAS (6.45) , you can use it to develop new exploits, or port existent ones, like bluekeep (I have ported a lot and they work great). Please let me know if this version is useful for you.

(Jul 26, 2019 08:47 AM)Fedd77 Wrote: [\[CITE\]](#) Hi bro, i leave the link here in case someone find it useful ...Version Linux?

Fedd77 - August 1, 2019, 10:28 am

(Jul 26, 2019 12:16 PM)amstrot Wrote: [\[CITE\]](#) Version Linux?It runs on any Linux with python 2.7 installed. You can run it in Windows or Mac if you want. Visit CANVAS site to get install instructions and dependencies.

Hope its help!

Sorry for this question but can you tell me how do you port the exploits on canvas and where do you port the exploits from?

Thank you

How do you port and from where do you get the exploits? Csn you share?

Thanks

Hello Fedd,

Could you please send me the canvas?

Regards
