Thread: [ardamax keylogger not sending logs](#)

noonee - July 26, 2019, 1:45 pm

Where could the problem be? I receive the test mail. It does record the logs but its not sending them. I set it up to send every 3 mins.

Reduce it to 1 minute and see if it sends..

Also is the stub encrypted?

A number of things could be wrong. Have you contacted their support yet?

Double check your smtp settings,if you are using a gmail email for the sending logs gmail could be blocking them. Also make sure (if using Gmail)to go to your email settings and allow "use less secure" third party applicatons

I persoanly use a cpanel to get logs in html format...not email so try use a hosting to get logs...also put a longer period i put 5 hours period.

Ardamax has been the best keylogger I have seen. It's very strong when installed on victims PC but recently I discover it doesn't send logs anymore. I used gmail, it say " enable less secure app" I did, yet can't still get logs. I used ftp, the test mail was sent but subsequent logs does not report. I have tried cpanel, plesk yet no positive result. The developer needs be informed about this inconsistencies. As for as I know. Ardamax is unbeatable in keylogger matter. But I will try the 5 hours interval as suggested by a member in the comment. I hope it works.

This guy "w!ndows7 " is a RIPPER !!! HE CLAIMS HE is a RAT SPECIALIST. BITRAT and so on

After opening a contract to last 24hrs even though he said he can get the job done in 40mins. I gave him a whole day and up till now he hasnt set up the RAT.

He has taken 220\$ for CRYPTER and to set up AND \$200 for email leads

Nothing was done up till now and he had stopped coming online. I guess hes blocked me. I have proof of all our conversation on SKYPE

w!ndows7 is not a Legit guy. All the services he said he provides are all lies..

HE IS A RIPPER
