Thread: [\[HOW-TO\] TRACE PEOPLE ONLINE WITHOUT DOWNLOADING ANY SOFTWARES](#)

FlyZone - July 29, 2019, 3:30 pm

Hey Hackforums, ?

These methods are not intended for any black hat activity or illegal purposes, this is for educational purposes only.

Im making a quick tutorial on how to trace anyone you want through social media, theirs alot of these tutorials but i added in my own methods that has worked every time

With these methods you can get there IP Address which can lead to there city/state/zipcode or there physical address.

Step one :

Find your victims email, facebook, or social media such as instagram and or snapchat.

Once you find your victims email, snapchat or facebook scroll down and read through the selection for which social media you have of them.

- SNAPCHAT -

If you have them on snapchat, you can easily look at there location if they have it enabled, or send them a PM on snapchat baiting them to click your link. "Hey man i saw this online are you okay? im worried insert link " with the link, go to grabify & create a custom link to grab there IP address, once you get there IP Address, you'll see there city/state/zipcode. Once you figured that out find there real name if you haven't. There real name could be exposed in there actual snapchat name or username, then find a free reverse person lookup online then enter there name, city and zipcode then continue digging from there.

- EMAIL -

if you have there email, this is probably the easiest way you can get any kind of info, you might be asking how? you can easily spoof your email without downloading any software's. Find out what there interest it, or maybe a place they shop at? spoof your email to whatever your choice is, this can be there favorite place to shop online, amazon, or you can spoof it to an online bank security team. once you made up your decision on what you spoof your email too, make the email look professional. Include your link, from grabify (make sure its a custom link) and make the email look super professional and request for them to follow up with the email by clicking on the link. It may sound weird but it worked everytime for me. Heres an example below.

Hello *****,

We noticed an usual attempt to login from " CHICAGO ILL " we've blocked the login attempt but to protect our customers we've temporary locked your account until we hear back from you. In order to verify your account please reply with your current up to date information that matches your account.

Until we hear from you, we'll be putting a temporary hold on your account. Below i provided the information needed, once we receive the information our security team will manually review your information and unlock your account if your information matches

Your first and last name.

Your current phone number under your account.

your current billing address.

Once we receive your information our security team will review it and unlock your account.

Thanks for shopping with amazon.

We hope to see you again soon.

Amazon.com

This is just an example, you may not use this exact one but feel free to use it and edit whatever you want to make it look more legit.

- Facebook -

Do you have them as a friend on facebook? perfect. facebook is the easiest way you can get the persons information, you can easily look at there friends list and look up the same last name as them, if you see other people with the same last name, then perfect. continue digging into there about page of the persons with the same last name and find out which location there about section sais, or go through there old pictures or statuses and gather information from that. or simply message them then follow these instructions <https://www.youtube.com/watch?v=Qe5VHSuFKbo>

If you have any questions or need help with your current situation feel free to shoot me a PM, this method might not work for everyone but has worked for me recently. This is a quick short tutorial on how to quickly trace someone online.

Hope you enjoyed or i could help.

Cheers

personally, if your using it to trace someone rather then doing something malicious like leaking there information online i dont see a problem with it.

F11 - July 29, 2019, 4:56 pm

No I wasn't saying it in that way. I meant, thread says "TRACE.."

Just thought this seemed more like Dox'ing. Not trying to be rude or anything.

Oh okay makes sense.

I Understand where your coming from though, and it does make sense.

Everything i do and post i make sure its fully for educational purposes only & not intended for blackhat activity.

Cheers
