Thread: [Question regarding Huawei P30 band coverage](#)

Nyx - August 1, 2019, 2:10 pm

I have been looking into buying a Huawei P30 for a while now.

It has the nicest camera of any phone that is currently on the market and that is the deciding factor for me when it comes to buying any new smartphone.

I noticed that it covers the following bands:

3G HSDPA 800 / 850 / 900 / 1700(AWS) / 1900 / 2100 - 4G LTE band 1(2100), 2(1900), 3(1800), 4(1700/2100), 5(850), 6(900), 7(2600), 8(900), 9(1800), 12(700), 17(700), 18(800), 19(800), 20(800), 26(850), 28(700), 32(1500), 34(2000), 38(2600), 39(1900), 40(2300)

In my area, B4 and B13 are the most used Bands (I have Verizon).

I was wondering if you guys think this phone would be compatible with my Verizon LTE network (I know Verizon uses CDMA and I will not be getting phone service if I am not in range of the LTE Bands)

I see several people on Reddit and other tech forums talking about this very same issue and if it will work.

I believe I can get it to work but I want to see if anyone else here has done anything like this for any other (International) phones in the past.
