Thread: [Mobale images not showing](#)

Claw - August 8, 2019, 9:15 pm

Recently when ever i check any thread images that are linked to imgur website it just doesn't show, i open them in new tab the link works well, but inside forum it just doesn't show the image, it was working fine before 2 hours, when i open the thread it can be scrolled but no images, so its just me or something is wrong?

Some info might help

- Android Version 9 (Pie)
- I'm not using any adblock apps
- URL's are not blocked in the router

What about that thread? Some if not all links are imgur and they work fine for me on mobile.
