Thanks Soul extractor for so nice and cheap offer .
i gave it a try after all what he was offering was so damn cheap.

what he is offering at \$5.99 per year . we can EASILY GET AT
Hostgator at \$7.95/month

certified hosting at \$ 6.95/month
(I am comparing above two hosts because i already own both of them)

Now i though what if the OP will turn out to be a scammer and will discontinue his service after 1-2 months. But still with the backup of my site i have nothing to loose but a little time to upload all backedup data to new host. and still i will be in profit because of his low price compared to other reputed host.

So i bought it and ,after having a look at my cpanel i really VOUCH for this guy.

Here is teh screenhot of my cpanel

i gave it a try after all what he was offering was so damn cheap.

what he is offering at \$5.99 per year . we can EASILY GET AT
Hostgator at \$7.95/month
certified hosting at \$ 6.95/month
(I am comparing above two hosts because i already own both of them)

Now i though what if the OP will turn out to be a scammer and will discontinue his service after 1-2 months. But still with the backup of my site i have nothing to loose but a little time to upload all backedup data to new host. and still i will be in profit because of his low price compared to other reputed host.

So i bought it and ,after having a look at my cpanel i really VOUCH for this guy.

Sorry, in blackshades there is an option to have all you vics report to a webserver and store info in a database.

Webserver - Hands down, our most unique feature. You can control your bots from iPhone, iPod touch, linux, mac, or anything with internet and cookies now.

Database - Easily store your bots connection info (tell how many unique bots you have), passwords (true logs, no logs of the same will be in there twice) and keylogs.

- Web Server - Control your bot through the web server, and also set up admin/guest accounts with editable privileges for guests!

Would it be possible to use these functions on your hosting. Thanks PS: just online now and BS just released a http bot. Can we host with you?

Actually sir..im looking forward to sell shared hosting accounts to my partner who do design websites for his clients..in our country ppl dont know much about websites..so when they pay for website..they mean their website should b all done and uploaded on net..hence they dont even know what a server is..
so.. my partner do A to Z work for them..purchase domain what they like to have and hosting.. and other stuff online..and setup them website and get money for all the stuff..so i asked him to get hosting from me.. his websites are mostly in html and in flash.. swf..
very light..
but he requires 99.99 uptime..
i hope we dont ran in to this problem again..

Nomoreonhackforums - January 18, 2011, 2:27 am

Well i will be honest.

THE SERVER WAS NEVER DOWN.

Some nation government has applied new rules.

We were up it was just OHV support who was not replying because of sat. and sunday.

Due to new rules many countries by mistake banned whole OVH IP's.

There was no problem in server.

I got this reply from OHV just now.

"Indian Government by mistake banned whole OVH IP's including some other countries but OVH contacted them and its unbanned now and this issue wont happen again"

Thank You

THIS OFFER IS OVER NOW. ?

no but i mean the shared ip associated with the server is of india or of france?
confused... i mean can one country block ip of another country?

also then if there are packet loss..so it means there are still issues with server connectivity..but i can open fine..

why it is showing packet loss to other countries like hong kong etc..

Hello mate ,

It's not an error.

It does not require 70 characters.

IT NEEDS 70 PASSWORD STRENGTH.

Password strength means your 5 characters password also should be STRONG one.

Means a simple word like :- "hello" won't work as anyone can hack it.

So it should be something different maybe like :- "1050:hello"

Hope you understand.

Thank You

Hello sir.!

Please update what is going on..

Sir to be honest please change server.. This server is very unreliable.

THese are problems i have got scince i have bought Master Reseller

- 1.Server was down for the first time for i guess up to two days (Problem was mentioned as Banned Ip)
- 2.Server was reinstalled and again was down for some time..but again backed up.
3. MySql Server offline for some time ..then again backedup.
4. After some days when i tried to make my second Reseller account through Master Reseller Page i got Page of License Suspended..and then that page changed after some time to Licence Expired.
5. Today one of my client asked me. why i cant add addon domain..and when i checked THE Addon Domain can not b added.

SOME issues solved but still issue of

1.Expired Licesce.

2.Addon Domain's Not Possible to add..

Please Sir Move to new server as soon as possible.. This Server is highly unstable..

Please Please..

We have successfully changed the IP because it was null routed from datacenter to prevent further damage from on DoS attack we had.

Now we control it to not let any sign on the other IP we move to this one.

Hopefully this is solved permanently.

I hope you can understand the situation over, no downtime will be happen from now on because we updated our DoS Firewall to be more bad on this situations

Just a question about the TOS, for offshore hosting i read that +18 porn is allowed but also that file
hosting is not allowed. What's up with that ?

Oh and what does it cost to change it to onshore ?

Already bought for a year, waiting on confirmation.

You can host files for your personal use but you can't upload files for publicly available for
download.

We won't charge you for that. Open a ticket if you want to switch to Onshore hosting.

i have a question before i put in my order

i want to host a music website on the offshore host

i will upload music to another site such as hulkshare, zshare, mediafire, etc & put the link on my

website thats hosted under you guys

i'm not hosting the file it with you guys, im hosting it on another website & just linking to it from the website hosted from you guys

i hope you understand what im saying

is that against the TOS?

and also, if the copyright owner of the material wants the content removed, would they have to contact you guys & you guys contact me to get it removed

or would they have to directly contact me?

also, would a lot of copyright complaints get my account with you guys terminated or what?

Yes you are allowed to do that. If our datacenter receives copyright violation report for your website then they will terminate your account otherwise no action will be taken.

If you can't stand 1 hour of downtime then you're not worthy hosting.

And it's just slow sometimes, all hosts are. And hosting isn't his fulltime job, like 99 % of all HF hosts.

I know. I've mistakenly set the file permission to 777 for public folders that may caused the recent issue to rise up. Anyways, I've fixed everything and I'm sure it wouldn't happen again. I apologize for the mistakes. Tbh, it was first time when I faced it. You always learn from your mistakes. But the good thing is, none of account was hacked. They were just redirecting all hosting accounts to suspended page.

This is the guy who tried to get into my whmcs.

I'm thankful for the people who have trust and patience for me and my services. I feel sorry for the people like Blood who doesn't have patience and opened a dispute on PayPal. It would let them go nowhere. By doing that, they would lose their money as well as hosting.

Things don't go well sometimes. All I get from them is 'Experience and perfection'. No offense for the haters. I try my best to serve my clients and I'll be doing it. :)

Thank you.

I use his service since a year now, never had any problem. The worst could be a down of 3-5 days but it is very uncommon and compensated.

Once again, Soul Extractor offers a very good support and his hosting is, in my opinion, the best in the offshore hosting market. And believe me, I tried a lot of hosting which all went down a few month after its opening.

Someone was spamming on server. I have suspended him.

I would like to bring this to everyone's attention that we do not tolerate spamming on our servers. I have found few accounts were hosting PayPal phishers. We do not allow bank/PayPal fraud on server. I'm suspending all the TOS breakers. Read TOS before ordering.

I've had some issues because it turns out that you don't have MySQLi installed, which is stupid, because even most free hosts have it. I need it to run XenForo. I want to be able to do MORE than I could do on free hosts, not less. Please read my tickets.

Not really lool. for example if someone uploads a shell and gets access to everyone public_html its rather easy to gain access to your WHMCS db also do you use access key or root password for servers in WHMCS config?

Well I have disabled some PHP functions to have additional security with that. Yes, I use access key in WHMCS server config rather than password. Also I don't use root account in WHMCS, I have made another account and provided reseller privileges to that to use in WHMCS.
