hello, I wrote this tool to download multiple episodes from twist.moe (they don't allow downloading at all, not normally).

Open source tool, you have to build yourself.

If the site doesn't allow downloading, then it's not allowed to share a tool that does. Especially since this is basically the same as torrenting.

No, this has literally nothing to do with torrenting. The site just doesn't have a download button. Nowhere on the site does it say you are not allowed to download the videos.

Seems weird to me, but ok.

These are the best sites for downloading anime in bulk IMO, always in great quality and good file sizes

Talked with the mods of the site, and they said it wasn't allowed, so I removed.
