Thread: [Need Help from an experienced OverClocker - 8700k, 1070ti](#)

**select123** - August 14, 2019, 4:34 pm

I purchased my PC a year ago, and am only now realizing both my CPU and GPU are overclockable. however I know it can shorten the lifespan of my pc or melt??

does somebody have a lot of experience and are willing to help me overclock my pc to the 5.0 ghz it says it can go to. I drop frames from 240 fps in fortnite and want to keep it steady and that.

### Computer Specs

Intel Core i7-8700 Coffee Lake 6-Core/12-Thread Processor

Thermaltake View 31 Dual Tempered Glass ATX Black

Corsair Air Series AF120 LED Red Quiet Edition

Deepcool Maelstrom 240 Liquid

WD Blue 3TB Desktop Hard Disk Drive

GIGABYTE Z370 HD3 LGA 1151

G.SKILL Trident Z RGB Series 16GB (2x8GB) DDR4

Corsair CS Modular CS650M 650Watt 80 PLUS Gold Certified Power Supply

Samsung 860 EVO 2.5" SATA III 250G SSD

MSI GeForce GTX 1070 Ti TITANIUM 8G

We'd be able to do it over a phone call, facetime or discord phone/video call while I do it.

I have no clue how long it takes, depending on it I can pay you in bytes, payment or possible free?

You can't overclock your CPU since it's an 8700, not an 8700k (k = overclockable CPU's on Intel).

You can put it on turbo mode tho.

When it comes to overclocking GPU it's pretty easy.
