Hello all, not entirely sure if this is the right section or not.

Going forward I am seeking the current hack(s) for the games and if you could please point me into the right direction for them.

Before you say google, i'm not comfortable trying to purchase a cheat and have some type of just sell me shit/junk or for computer to get compromised with a trojan or some shit.

Anyways does anyone currently know:

Overwatch - Tried googling, some looked good and promising. Just wasn't too sure.

Fortnite - Can't seem to find these anywhere, specifically looking for something to help me with building / macro for building quickly.

Realm Royale - Didn't try, but perhaps someone knows.

Overwatch - Depends how much you wanna spend. A good cheap one is GotchaBot it's like 30\$ a month.

Can't really help you out on the rest because I don't have experience with them but i'm sure you can find some good ones on OwnedCore in the Marketplace.

October of last year and I've never been banned

EDIT : I've been using for 3 months now roughly

For Overwatch you can check the following:

Xeraph - Personally i've had the best success with Xeraph over 4k SR then sold the accy
Critical Hit - Used it, it's okay, definitely for the price
AimBuff - Not used b4, but heard its similar to CH

I checked out the First site, not gunna pay \$240 bucks for a Fortnite hack. Max I was hoping to spend is probably like 50 bucks. Don't even care if it got me banned. Like I said I just more of a macro to build

You won't find anything that cheap for fortnite simply due to the fact that Epic Games will sue the shit out of Cheatdevs whenever they can.
