Thread: [Building a personal website + blog for a beginner?](#)

Approve - August 19, 2019, 11:56 am

Hey guys,

Thought I'd come here to crowdsource some recs.

I'm interested in building a website to host my resume (formatted for web-viewing, not a PDF), some blog writing, contact options; generally, pretty basic text-based content.

What would be the best route to take for buying a domain, hosting, and then actually building (with no coding experience, nor interest in learning at this time)? Speed and cost are my primary concerns.

Looking forward to your replies! :)

You could do it for free if you have .edu email <https://hackforums.net/showthread.php?tid=5953651>

Thanks for this! I do have an edu email, but the process seems a bit too technical for me given time constraints. I have a \$\$ to spend and don't mind investing in this long-term.

Commend you on the post though -- seems like a great method. ?

IF you are looking for hosting and a domain I offer pretty affordable plans. We run litespeed on all shared servers along with cloudlinux.

You can also purchase a domain through us as well. We offer free domains with annual hosting plan purchases.

We also include CloudFlare with Railgun on our shared hosting plans. This is typically \$200/month if you go direct through CloudFlare.

I would also be more than willing to help you out with getting started etc with getting a personal website started and help update it with you.

1. Get a domain. <https://www.namecheap.com/>
2. Connect it to some shared hosting. <https://hostgator.com>
3. Install WordPress on your new website. <https://wordpress.com>
4. Find a theme you like and install it. <https://wordpress.org/themes/browse/featured/>
5. Develop your desired pages/features.
6. ????????

Or, you can hire someone like me to do it for you.

Good luck!

If you buy shared hosting from us we can install wordpress for you with a click of a button. (most cpanel providers include softaculous or installatron)

you can get a domain name along with hosting from us all in one.

We also have litespeed servers which is optimized for wordpress to give performance

This dude gave you the answer.

if you want to do it solo there is plenty of step by step tutorials in youtube.
or hire someone to go faster and with no problems
