Thread: [iOS 12.4 Jailbreak released](#)

Mom - August 19, 2019, 12:02 pm

Not going to make this thread long as hell, just going to get straight to the point.

Pwn has released a Jailbreak for iOS 12.4 on Sunday, pretty unexpected, how? Apple fucked up and introduced a bug that has been patched in iOS 12.3 and 12.3.1 back into 12.4, allowing people like Pwn to jailbreak that firmware.

Download: <https://github.com/pwn20wndstuff/Undecimus/releases/tag/v3.5.2> (not going to update the thread with updated versions, but just go to his github every now and then, or follow his twitter.)

Download Cydia Impactor and that IPA that I linked above, you must have iTunes installed to have Cydia Impactor work properly. Open Cydia Impactor, connect your phone, drag the file into Cydia Impactor, and sign in with apple, should be easy.

You can also install it from third party sources like TweakBox, and Ignition.fun, I used Ignition.fun because he literally updated it once it was released, lol.

This hasn't happened in a while where a Jailbreak has been released for an up-to-date firmware in a while, so use it to your advantage.
