Thread: [RAT Spreader wanted](#)

eqnt92hj6y2490y62w - August 20, 2019, 1:55 pm

This is more of an opportunity for both of us, I have a small program, it uses phishing to grab data and for some reason ? it is often run as administrator - I'm here to propose that, my idea is that, if the program is run as administrator - my file would do it's work and also act as a dropper for your RAT, in return for dropping your rat, I'm asking for some help spreading my "dropper" and/or access to some of the data that is on the host PC.

Also, my PMs are open if anyone wants to talk about this.

If you ever end up being someone great, you won't be remembered as eqnt92hj6y2490y62w. You'll be remembered as that guy with a weird name that no one can recall.

True, I might make another account tommorow, not sure really - I think I used the wrong IP to sign up for this one anyway

Yes, much better for a name. Thanks for taking my advice into consideration.
