Thread: [I forgot my router page's password and i need to portforward](#)

Kidquiz - August 20, 2019, 3:47 pm

basically i changed my router page's password a few years ago like 1 or 2 and now i forgot it, yes i could reset my router but i don't want to do that, is there a way to portforward without using my router page
like for example some type of software

Lindros - August 20, 2019, 10:23 pm

I don't think that there is a simple solution to this that I know of. That is generally why I just leave it default. I'd honestly just reset it.

CyberStrike - August 20, 2019, 11:53 pm

Well if you don't want to reset the password I guess you are paying for a VPN or using ngrok/serveo. Reset the damn router make your day easier.

There's literally a push-pin button on the back of the router to reset it to default configuration?

Handsome Hawk - August 21, 2019, 6:04 am

I guess you don't want to reset it cuz you don't know how to set it up again. its like 1 minute job but ok. without reset you can try routersploit which is probably the easiest way. or buy vpn with port forward.

Fedd77 - August 21, 2019, 7:00 am

Technically is possible yes if the software you are using supports UPNP. Compatible software can take advantage of this protocol in order to arbitrary open ports on routers firewalls supporting UPNP. If is not the case, just reboot the dam router.
