Can you re-request an SMS code from the exact same number?

No, that's not possible! The numbers are provided by the service. Basically this is how this works: you purchase sms verification for a website, I give u the number, you enter the number on the website, I give you the code that is received by that number.

Okay no problem, do you know any service that lets me get multiple codes from one number?

I can rent you the number for 1 hour for 10\$. Whether a single number can be reused in a website depends on the website. for those that allow reuse of numbers u can use it as many times as you want. you can also use the rented number for one hour to verify as many service as want as long as that number is accepted in those websites.
