Thread: [\[Free\] Y Browser | Free chromium browser with cookies import and a lot more](#)

notmad - August 25, 2019, 8:34 am

"Functionality" [\(Click to View\)](#)

- + Customization of user interface (E.g if you don't need proxy settings just hide this function in settings and you can do the same with any function you don't need)
- + Adding \ Removing extensions from browser(If you think that you don't need extensions or exact extension you can hide it from UI in settings)
- + You can run sessions in incognito mode (You can change this parameter in settings)
- + Turning on \ off session sound (You can mute session also in settings)
- + You can set start page or pages (E.g. if after session creation you need to have open websites like this : paypal.com, coinbase.com etc. You can set it)
- + Import cookies in JSON \ Netscape (Converts automatically)
- + There are no limits on session creation (you can run as many sessions as your pc can carry)
- + Proxy server connection HTTP \ HTTPS \ SOCKS5
- + All settings are unique for every session (You can set different proxy \ cookies \ start pages \ browser settings \ etc for every session)
- + CAPTCHA automatic solver (ReCaptcha)
- + Actions log, program informs you about any action it performs
- + User-Agent settings (You can emulate any browser \ OS \ device you want directly in browser using User-Agent switcher extension)
- + You can use nordvp after session create
- + Check for matches with set list of domains in cookies (You can set once list of domains you are looking for in cookies and after every cookies import program will check for matches and show amount of matches)
- + There is a lot of validations (If you will enter link \ proxy it will automatically correct link or will inform you about mistake)

The most important function:

- + You can donate to support software - Qiwi, Payeer, BTC (Remember everything above is FREE and from your activity depends will software get new updates or not)

"Description" [\(Click to View\)](#)

Y Browser - Soft created to speed up and make easier work with cookies. It's usual chrome, a bit more protected from the point of anonymity, with opportunity of cookies import in different sessions e.g. You can start two or more sessions with different or the same cookies. The program accepts cookies in JSON format but there are inbuilt cookies converter so if you have cookies in Netscape it will convert them to JSON automatically.

Example of Netscape cookies:

```
