Thread: [Quasar and NjRat not working for me](#)

Links - August 28, 2019, 5:19 am

I port forwarded, set the port and I'm using a VPN. I Build the rat, I crypt it using Lime crypter, I send it to the victim. They open it and it doesn't show up on my side. Anyone know the problem?

virus - August 28, 2019, 5:22 am

Check ur firewall, check if the port is open via canyouseeme.org. VPN's running? Always check the connection before you crypt.

Mate, I cannot thank you enough. As soon as I turned off the firewall the VPN turned on and most likely everything will work now. Thanks a ton!!!!
