Thread: [Is there any cloud storage account manager for Windows?](#)

James Burnham - August 31, 2019, 1:01 am

I have an external hard drive for backups but it recently got corrupted, and I am looking for something more reliable. I see that there are many cloud storage providers, like OneDrive, Google Drive, Mega, Dropbox etc. What I would like to have is a desktop app which manages multiple accounts of each storage provider so it will make multiple backups across all of them. Do you know of any software that does that job?

You're looking for RClone.

Look at my sig if you're into GDrive btw.

Avoid Google Drive, OneDrive and Dropbox in all circumstances if possible. [MEGA](#) is pretty decent. You might also want to check more privacy friendly cloud storage at [PrivacyTools](#).

RClone is fantastic as Giselle said. I transferred Terrabytes with fullspeed from one account to another.

Yeah, but it's a command line tool. Isn't there a tool with a graphic interface?

Why not use Mega just pay and upgrade your account, Been using them for backups for years now

Cloud storage is absolute garbage. Stay away from it at all costs.

Setup a shared network in your own house and clone the files across multiple partitions.

A \$50-\$100 router + however many drives you need. Then setup remote access to it via secure connection so you can access it away from home if you need too.

I think MEGA is better ,My 4th year now and i have never had any issues,Backup is smooth and simple plus its well encrypted with 2FA,I dont see how that's garbage

stay away from this crap

I don't even know you?

Your rep says it all rofl.

You still need off site backups though. That requires renting space somewhere else or finding another friend/family member to colocate a NAS server.
