[TUTORIAL # How Setup a Botnet for Beginner]

Noticed , many new user looking after " How setup Botnet " so i decided take 10 min from my coffee time and try post here a Tuto

I will explain you Basic on How you need setup the Botnet , is it very common for most of them .
Like 500+ botnet , loader etc.. exist i cant make tutorial for each of them but i will make one General who can be used in 90% of botnet

What is Botnet ?

Botnet is Program usually hosted in server that can Manage Controlled Hacked computer (called Bots,Installs,loads)

Each Botnet have specific function , like Loader , grabber , stealer , miners etc....
(Smoke is Loader and have plugin stealer,grabber,ddos etc...)

Before start you need get a Botnet , Panel file , Builder(create exe file) or Bin (exe file already build for you)

That not hard found Free Cracked Botnet for 0\$ over the web ... Google some of them like " Smoke cracked + builder"

The Requiered !!!

- Botnet File (PANEL + EXE/BUILDER)
- Server online Shared hosting , Vps is fine ...(Cheapest one is Shared host can get for 20\$/month on offshore location)
- Some times too understand ;)

-STEP 1

Once you get from your famous hosting acces your server , you can follow this

- Upload the Panel file into server (Create Folder "BOTEST") and extract them
- In MOST of case you have "Config file" named config.php , cfg.php or something similar !!! This is where u need enter settings (some times this is set on Install.php like neutrino)
- Look after DB SQL most of time u get one (or create after if you get Install.php file)

Now you Should have see the Config file (or install file) and SQL file if exist , Lets Go on STEP 2

-STEP 2

Go in My SQL in your server , and create New Database for the botnet , create user, pass, name the DB and VERY important ADD ALL right for users on the SQL db ! (at end of sql settings)

Go now in the "config" file and report data of SQL db (Name , pass, user) and save it

If you get SQL file , go in the SQL and Upload the database file on the DB you created (should see cmd executed in green)

-STEP 3

in most of case this will let your panel online so lets see

open browser and type adress of ddomain <http://yourdomain.com/BOTEST/index.php> or login.php this should give you acces your panel !

Be sure path too acces the panel are right and folder in server have good Permission (777 , 755)

STEP 4

GET your builder , and create your exe file according the botnet panel

<http://yourdomain.com/BOTEST/index.php>

Job is DONE !!!

This is VERY BASIC TUTORIAL FOR BOTNET !!! CAN BE DONE IN MOST OF BOTNET CASE ,
LOADER

ok now lets make Real tuto on Botnet and Loader

Azorult , Neutrino and smoke

PHP Code

<?php

[color=#ff3333]Azorult Setup Process [/color]

<https://www.youtube.com/watch?v=eqbm-c2m2Ps>

[color=#ffffff]Upload File in server and extract it

Add 777 perm folder INC,CSS

Create DB SQL , name,user,pass and perm

upload dump.sql in the SQL db

Config data in index.php DB Host ,user...

Connect too the panel -> <http://yourdomain.com/azorult/admin.php>
Open builder and create file on domain -><http://yourdomain.com/index.php>

Done !!

[/color]

PHP Code

<?php

[color=#ff3333]Smoke Loader "Cracked" Setup[/color]

[color=#ffffff]Upload File in server and extract it

Add 777 perm folder INC,FILES,UPLOAD

Create DB SQL , name,user,pass and perm

Config data on CFG.PHP (user,pass panel , key , db name,user,pass)

Open <http://yourdomain.com/smoke/install.php>

This should install DB

edit file and delete install .php file

create your file <http://yourdomain.com/smoke/index.php>

[/color]

PHP Code

<?php

[color=#ff3333]Neutrino setup [/color]

[color=#ffffff]Upload File in server and extract it

Add 777 perm folder INC,FILES,UPLOAD

Create DB SQL , name,user,pass and perm

Open <http://yourdomain.com/neutrino/install.php>

enter data inside (db , name , user etc...) then it will sort Path with Key too acces server (copy/
paste and open it)

other link is path too create exe file

Copy paste on builder and create file !

[/color]

bestcucumberever - September 2, 2019, 9:25 am

It can be helpful for beginners. Thanks for tutorial

HeaderHost - September 2, 2019, 11:10 am

Nice tutorial, sounds good for beginners.

Bots Cheap - September 2, 2019, 12:24 pm

lmao,whats this? goodluck

Thank you brother's wish this can help new member build botnet , and stop open thread on "how setup botnet "

(Sep 2, 2019 12:24 PM)Bots Cheap Wrote: [\[CITE\]](#) lmao,whats this? goodluck
Lmao ;) check your thread service if you really want have fun !

Suxen - September 8, 2019, 2:55 pm

Pretty good. Do you sell SSH/Telnet botnet sources? If so, I might be interested.

Dafuq - September 17, 2019, 3:52 am

Although you guys say that this tutorial is good for beginners, I somehow manage to feel lost every time I read anything or watch any video about Botnet. Maybe coz I am starting off as an absolute noob? Any tips on how I can get up to date with the terminology, basics, etc?

I used to RAT back in 2012-14, but that was just for educational purposes, I am fascinated by botnets right now, but I am unable to get my beak wet. Any help would be appreciated.

Thank you!

Dotexe - September 17, 2019, 4:00 am

Thank you!

I might hit you with few advices once i get home. Its literally not that hard if you are dedicated to learn. However keep in mind that maintaining a botnet will cost you lot of time and resources.

bamiwo - September 17, 2019, 6:40 am

is it good for begginers too.

Dafuq - September 17, 2019, 9:38 am

It would be really awesome if you could guide me. I am really fascinated by it, but even after watching numerous videos, I am unable to get my head around it. Thanks a million ?

smelltheglove - September 24, 2019, 8:21 am

98% of botnet users/buyers end up losing money over aell betwee n expensive hosts, cost bot itself, and finally they get it all set up and urnning and all they can think to do is....get more and more raomdom bots (wihch might i add requires them oftne times to PAY FOR THAT TOO. they way

security is to today, i believe i a general sense, we are headed into a fileless (Executable) RCE world of blackhatting.

but to get back to the point, if youre going to try and make any substancial money with a botnet yoo need to realize the role that its playing the hack process. learn the basics of real attacker vs target specific penetrating and studying what often is the end goal at the time,...and with a bit of a creative mind you can make money good money. but I'll say this, whenever I have read anything of a tutorial on botnetting or whatever I dont think I've ever read of a good prActical way to make money. I think iget it though, anybody who knows how to do it oesnt want anyone else to know!

Furyan - September 25, 2019, 4:40 am

good guide will help noobs.

PM me, learning with a partner is easier than alone ? ? ? at the same time i would like to help you, i would like to learn with you men, im fascinated by botnets as well

ZERO2SIX - December 4, 2019, 4:29 pm

these are the basics of setting up a botnet.. for "real beginners" this still is pretty difficult i think... but you did a good job sharing this

dockTor - December 4, 2019, 5:02 pm

There's definitely more than one way of doing this, but your guide should serve beginners well.

Sara - December 8, 2019, 7:50 am

Nice guide. Sure it will help people.

Drowzy - December 9, 2019, 10:07 am

Would love to give this ago!!!
