Thread: [Free Direct Download Link](#)

One - September 1, 2019, 7:30 am

This is actually not a new thing. But am seeing a lot of people asking me so I decided to put this out here.

Register a Discord account and then make a Server, You can decide to call the server anything.

Let's say Server name is "Files upload"

After you're done with that, upload the file on the server then copy the link, You now have a direct download link, Hope this helps some people.

pein - September 1, 2019, 7:45 am

well, discord limits you to 8mb? even smaller for photos, i think 2 mb

but yeah, the files won't be lost, and they got a direct link not a relative or time based link so you can link small videos or pictures from discord

i much rather prefer imgur, as i got a screenshot tool, and an imgur uploader named easy imgur which acts as a 2 click upload and copy the link and a history for my uploaded photo links

For uploading malware? ?

It's just going to distribute the file and then it will become detected. I would avoid using chat applications to host your malware.

Well it doesn't distribute

Yes, in fact, it does.

Pretty simple to run a test, I did it a while ago just not willing to waste time doing it again since I already know.

Go get metasploit, pop open and use msfvenom, create a payload directing to any URL or server. Don't encrypt it at all, just go and send to 4-5 different empty servers or people, and tell them not to download. Check back on the detection rate every so often, don't do anything else with the files. This way you know it is the distribution from Discord servers to scan the files.

You also have to think of it this way, why the fuck would they not?? It would make no sense, and no reason to assume they wouldn't. Their target audience is little kids/teenagers.

99% of metasploits payloads are all trash, their Signatures are everywhere . Before i made this thread i have already done a test with a good Fud stub and it stayed for 2 weeks with no detection

??? No shit sherlock Imfao

It's not for real usage, for testing purposes. You must have not read what I said because you seem very confused

Discord will distribute to scanners

Using this method for a direct link when spreading malware is fundamentally stupid.

Aye captain, Case closed.

This thread is to help those that needs a free upload server.

Ps: everything distributes,Not like file will stay fud forever.

Not true, and not true.

Just using a bit of Google can help you come across thousands of places to host for free, along with many methods. Then you do a bit of testing and see if they distribute, if they do, move on to a new one. Simple as that.

I use a free email server to host my direct links, which surprise, does not distribute lol.
