Thread: [iFrame that shows http content on https site?](#)

James Burnham - September 2, 2019, 4:09 am

Is this possible? I see some old solutions but I can't find one that still works.

Nachfolger - September 2, 2019, 11:25 am

Most browsers block this for obvious reasons. You could potentially serve the website through your own HTTPS domain using cURL to fetch the pages as needed.

More work than it's worth, IMO.

Frankey - September 2, 2019, 11:27 am

No, not possible. To be honest you do not even want this to be possible. Will be really insecure.

Oh, shit. Forgot that that's a thing. Well if you have a lot of time to develop such a script, go for it haha.

Squito - September 3, 2019, 12:42 am

If you can, put that old stuff behind Cloudflare, so you can get HTTPS without changing anything on that old site.
