Thread: [Crypter with Rootkit feature to hide process](#)

aerohacker - September 2, 2019, 10:46 pm

Most Crypters has features like "Hidden Startup" and "Process Persistence", but which ones has a feature to hide the process like a Rootkit?

That is not the job of the crypter.

Whick kind of persistence do you use in your Crypter?

I want a Process Persistence feature that make the process unkillable to any Process program like Windows Task Manager, Process Explorer, Process Hacker or even BotKillers.

Something unkillable like AntiVirus process or SYSTEM NT Privilege.

AV process uses some kind of Rootkit Ring 3 or Ring 0 to make the process so hard to kill?

SIM-3132187 - September 4, 2019, 11:46 pm

They protect itself in ring 0 yes. So you « can't » do it. But it's not the job of a crypter as Nosferatus said. You need to find a dedicated coder.
