Thread: [Mobale scale problem](#)

Claw - September 6, 2019, 4:07 pm

So today i cleared cache in my mobile, then i was off pc wanted to check hf in mobale, i took a look at threads and i noticed that the right scale isn't in place, idk if its new or old, cause i don't use mobale too much, here is an example

Edit: i just relised its only in threads the main page is fine.

i use android pie

tested with opera and chrome browsers

enabled java script, etc...

it was fine until i cleared cache today.

Yes I noticed this, it's on my todo list of things to do for the day.

EDIT: Just in case you are interested, it is because of the new tooltips that were added to the postbit buttons. The one on the farthest right is stretching the page even when it is hidden.

Great, keep it up.

F5 refresh your cache or delete it on mobile and it should be resolved now.
