Thread: [After shell is uploaded...](#)

BushWalker420 - September 11, 2019, 9:24 am

after it is uploaded, what you do you guys do with it? i use mine for ddos and ads..I'm sure there's a broad spectrum here.

Ahh, i suppose we all used to be skid like you.

BushWalker420 - September 11, 2019, 9:49 am

everyone starts out somewhere, even trolls.

sounds like you have a secret, making some good money from it?

BTC - September 11, 2019, 9:52 am

? This cracks me up, haven't done this shit in years but I guess it's true that everyone starts somewhere.

Back in the day used to have it redirect to the ic3 file a complaint form.

And on the left, kids, you'll see a real live script kiddy! Remember not to stick your fingers in his cage, he isn't too smart and might try to bite you.

f1re_w1re - September 11, 2019, 8:48 pm

I like not to upload shells on servers I dont own because I dont like being in an enclosure with a bunch of dudes that may look at you funny. Hopefully you can grow out of that phase before you realize it a little too late.

godjustice555 - September 12, 2019, 12:38 am

plant at least another 3 way in that only you can access and hard to trace.

do a db dump for selling.

depending on the access and the server's admin (not all server are run by professional)

it can be setup and use as a jumping board for future hacks.

in some cases, running a key logger might result in more access to other servers. (eg. some one i know gained git access and modified their code and gained access to all servers that runs that code)

use it to capture cookie etc

and what i don't recommend is keep brute force and ddos to minimal as they doesn't really bring u much money, instead putting yourself in high exposure

myselfandi - September 14, 2019, 5:56 am

You try to root the server if possible.
