Thread: [Mybb plugin issue need help updating it for latest version](#)

Corruption - September 12, 2019, 1:41 pm

Okay so am very confused atm because am unable to update a old plugin for mybb (php) to a new version of mybb.

The error that I get with the plugin is

SQL

1366 - Incorrect integer value: '' for column 'canjoinreg' at row 1

1366 - Incorrect integer value: '' for column 'alsojoinreg' at row 1

A bit of google search said I need to change sid value to "0" which I did but no changes.

Tried few other things but failed anyone have a idea what I should do to fix this plugin ?

This is the plugin: <https://pastebin.com/raw/86ym2bTf>

PHP Code

```
<?php
/**
 * Pick Group on Registration v1.1
 * Allow users to join specified groups on the registration page.
 *
 * Created by NaXuh
 * groupregister.php
 */

// Disallow direct access to this file for security reasons
if(!defined("IN_MYBB"))
{
    die(
        "Direct initialization of this file is not allowed.<br /><br />Please make sure IN_MYBB is defined.");
}

//Admin CP
$plugins->add_hook("admin_formcontainer_output_row", "groupregister_row");
$plugins->add_hook('admin_user_groups_edit_commit', 'groupregister_admin_do');

//Registration
$plugins->add_hook("member_register_end", "groupregister_register");
$plugins->add_hook("member_do_register_end", "groupregister_registration");
```

```

function groupregister_info()
{

    $db->write_query("ALTER TABLE `".TABLE_PREFIX."usergroups` DROP `alsojoinreg`;");
}
?>

```

Lives - September 14, 2019, 11:24 am

Found this on some foreign forum:

PHP Code

```
<?php
$updated_group['canjoinreg'] = $mybb->input['canjoinreg'];
$updated_group['alsojoinreg'] = $mybb->input['alsojoinreg'];
```

Change to:

PHP Code

```
<?php
$updated_group['canjoinreg'] = $mybb->get_input('canjoinreg', MyBB::INPUT_INT);
$updated_group['alsojoinreg'] = $mybb->get_input('alsojoinreg', MyBB::INPUT_INT);
```

because MySQL5.7 otherwise complains.

You can just Copy & Paste this (Updated Code):

PHP Code

```
<?php
/**
 * Pick Group on Registration v1.1
 * Allow users to join specified groups on the registration page.
 *
 * Created by NaXuh
 * groupregister.php
 */

// Disallow direct access to this file for security reasons
if(!defined("IN_MYBB"))
{
    die(
"Direct initialization of this file is not allowed.<br /><br />Please make sure IN_MYBB is defined.");
}

Hey there,

Thank you for the reply but this did not work.

Corruption - *September 16, 2019, 3:41 pm*

Turns out my hosting is causing all the mysql issues.

illogic to set a value of an integer and autoincrement field, so you can not put values in there the system automatically assign it.

So it was due to hosting having some type of restrictions with this values.
