UAC Escaper v0.1

This is an old method to bypass UAC. I created this simple builder to make it easy to compile without the need for IDE. Just drop and drag your file to make it bypass UAC.

Tested on win7 64bit SP1 + win10 64bit "latest version"

Which NET version machine must have if I want to bypass UAC, it's running on XP (don't know

which SP)?

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
