[CoinMall](#) would have been an option, but we also use express checkout it seems. I'll check with the dev team tomorrow to see if it's possible to toggle between old and new. Any reason why you prefer old btw?

Hello, if the old one is used, many people and friends also would use it, and the reason why we prefer old version (PayPal Adaptive) is because when we receive payment from customers, we receive it instantly and there is no hold from PayPal.

Thank you for the reply!
