Thread: [Give me some nice WinAPI Projects](#)

VulnTutorials - September 18, 2019, 7:21 am

Hey guys I am bored and I am looking for some sick WinAPI Projects. Can be max. intermedian shouldn't be to hard hahah ?

HFDone - September 18, 2019, 7:34 am

?

screenviewer, you send screen bitmaps and the other receive them and print them to the window

If you truly want a deeper understanding about WINAPI, I suggest you challenge yourself by re-implementing some WINAPI functions. For example, try to implement wsprintfA yourself ;)

Shapeless - September 20, 2019, 6:20 am

Come help me with my project. I am in need of serious help. For example if you could make a winapi function that grabs the coordinates of a selected screen section and saves it for my app I would be very happy. Also possible to make a contract later on if interest exists!

Check my post under the vb section

Check my post under the vb sectionif i understood you correctly, you can call GetForegroundWindow then GetwindowRect to get its coordinate, now align your app accordingly.

For example, try to implement `wsprintfA` yourself ;) `wsprintfA` is just the winapi version of CRT's `sprintf`. I'd say `GetProcAddress` is a better function to re-implement in-order to gain a better understanding of windows internals.

+1 It gives a very good experience regarding the PE structures
