Thread: [LUCKYBOT - THE AI-ENABLED GAMBLING BOT \[HQ | AUTOPILOT\]](#)

BlackXPearL - September 19, 2019, 4:10 pm

Starting a new thread since can't edit the [previous one](#) anymore.

A bot that actually works ...

LuckyBot uses a built-in AI engine to analyze and predict roll patterns. It then uses multiple strategies to avoid losing streaks and bet on rolls with high probability of profitability.

The AI engine ensures that the bot gets better and better over time by analyzing more and more patterns. You can try the bot with limited features for free and see it in action ...

Basic Version (0.01 BTC)

- Bet on BTC and 1 altcoin of your choice
- Basic AI engine: Basic AI engine with longer training sessions than the free version allows better estimation of roll patterns!
- 100 rounds of betting uninterrupted. After that bot needs to be restarted manually (~once in 2 hours). This can be repeated as many times as you want.
- Unlimited support and free updates for 1 month!

Premium Version (0.02 BTC)

- Bet on BTC and 3 altcoins of your choice: Bet with low investment and even lower risk!
- Advanced AI engine: Advanced AI engine with long training sessions allows better estimation of roll patterns!
- Changing the seed: The AI engine automatically generates new seeds and retrain when a losing streak is encountered, allowing to beat the house edge!
- 1000 rounds of betting uninterrupted. After that bot needs to be restarted manually (~once in 24 hours). This can be repeated as many times as you want.
- Unlimited support and free updates for 3 months!

Pro Version (0.04 BTC)

- Bet on BTC and all altcoins: Bet with low investment and even lower risk!
- Advanced AI engine: Highly advanced AI engine with long training sessions allows best estimation of roll patterns for minimal risk and maximal profitability!
- Changing the seed: The AI engine automatically generates new seeds and retrain when a losing streak is encountered, allowing to beat the house edge!
- Multi-thread: Run multiple sessions in parallel for maximal profitability!
- Autopilot: Run the bot 24/7 on a remote server!
- Unlimited support and free updates for 6 months!

Note:

1. You need to have at least 0.01 coins in your account for the bot to work.

2. You can test the bot for free with lucky tokens (you will receive 500 free tokens after sign up).

FAQ:

Spoiler ([Click to View](#))1. What do I need? internet connection and investment in cryptocurrency (at least 0.005 coins, any coins)

2. Is the method available worldwide? yes

3. How fast I can start making money? You can start making money right away after a few minutes setup of the bot

4. Does the bot get banned? no, the website doesn't check for bots

5. Is this martingale? No. Martingale is a memory-less and blind betting strategy in which previous rolls are not considered. The bot analysis previous rolls and plays multiple strategies based on that. For example, if there has been too many rolls below 50 in the previous 100 rolls, the next 100 rolls are likely to have over-representation of rolls over 50 as one would expect the overall outcome follow binomial distribution.

6. Do you 100% guarantee to win? NO! Just to be clear, the bot is not a 100% winning machine. Normally you play against a casino with 1% house edge and you hope to win big and walk away before you lose your money (99% chance in a casino with 1% house edge). What LuckyBot does is to fight the house edge and decrease it from 1% to 0.1% or less, which means longer shot at winning big (>99.9%). Imagine rather than 100 shots you are given 1000 shots at a goal. It would be more likely to win with 1000 shots, but there's still a chance that you lose. Winning with chance of 100% is mathematically impossible and that's not what this bot claims to do. So, please Keep in mind this is still gambling and there's always a chance of losing with gambling!

Reviews/Vouches

Spoiler ([Click to View](#))

(Jul 15, 2019 04:26 PM)R E S T L E S S Wrote: ([CITE](#)) I bought the platinum package and can confidently say that the bot does exactly as is advertised.

Upon signing up, you get 500 lucky coins (which is the local on site currency). I used these 500 tokens to test the bot overnight. I woke up to a balance of 553 which was a 10.6% increase in my balance.

An hour ago, I deposited 0.025 BTC, and within an hour my balance is at 0.0259373, this is a 3.74% increase in my balance in about an hour. Of course, there is a risk to gambling, but I am very satisfied with my purchase. Although my gains are not HUGE, but that is because my balance is not a lot either. The more you start with, the more you will make back. I just put in a small amount to test with. Will be depositing more and be posting back in a week or so on my progress.

Bets after 9 hours of running bot

Balance after 8 hours of running bot on lucky coins and 1 hour on BTC.

Around how much a day safely will i make with this?

Is it an exe file or can i run it on chromebook or my phone?

BlackXPearL - September 19, 2019, 9:08 pm

(Sep 19, 2019 09:03 PM)Demonata Wrote: [\[CITE\]](#) Around how much a day safely will i make with this?

Is it an exe file or can i run it on chromebook or my phone?you can potentially make 10-30% daily but please read the faq as winning is not 100% guaranteed.
the bot is an exe file and only runs on windows.

If only it was 100% guaranteed winnings. Too expensive for a method of gambling.

BlackXPearL - September 19, 2019, 10:13 pm

It is true that the method is still gambling, but it is nothing like the cheap bustaship scripts and martingale variants in the market either where you lose all your money in a losing streak. The AI engine is trained and gets better as you go. Besides, the bot plays with very tight stop-loss, so even if it loses a few rounds you wont lose all ur money at once like martingale ...

Well good job on this and it looks interesting but I advise you to lower the prices a little bit so people can get a chance to try it, specially if its still related to gambling and there's no high success rate guaranteed

UnpredictableLegacy - September 20, 2019, 3:37 am

This reminds me of Bustabit predictors I used to buy lol

BlackXPearL - September 20, 2019, 8:58 am

(Sep 20, 2019 03:37 AM)BitcoinFactory Wrote: [\[CITE\]](#) This reminds me of Bustabit predictors I used to buy lol

this has nothing to do with bustashit! it's a dice bot with fully humanized gui and built-in ai engine

RBH - September 20, 2019, 9:04 am

This doesn't work, every betting site uses a random number generator. It isn't something you can predict. Stop using buzzwords like AI to say you can.

It is literally mathematically impossible.

You are right, the bot doesn't "predict the next roll". What it does is to analyze the previous roll to predict more likely rolls in the next n rolls and adjust bet parameters accordingly. For example, if there has been lots of rolls >50 in the past 1000 rolls, there's a higher chance that the next 1000 rolls contain more <50 rolls, since overall outcome should follow a binomial distributions. And yes, as I mentioned in the faq this is still gambling and winning is not 100% guaranteed, but u get better results using this bot than plain gambling ...

That is called the gambler's fallacy (https://en.wikipedia.org/wiki/Gambler%27s_fallacy). Statistics don't work like that.

What you are saying is basically the same as saying that if I get 1000 heads in a row when coin flipping the next 1000 should be tails because a coin flip should follow a Bernoulli distribution with $p = 0.5$.

Each throw is independent without being influenced by the previous results. The random number generator isn't aware that it should follow a binomial distribution it just does because of the randomness it creates. Having 1000 rolls with a lot of 50's is literally just luck, it doesn't say anything about the next 1000 rolls.

I know you say in the FAQ that it is still gambling but if you are basing your bot on the reasoning you mention in the quote the bot doesn't have any advantage.

rogerand19 - September 21, 2019, 12:07 am

so its possible to lose all of my balance?

BlackXPearL - September 21, 2019, 8:03 am

(Sep 21, 2019 12:07 AM)rogerand19 Wrote: [\[CITE\]](#) so its possible to lose all of my balance?

The bot is nothing like the bustashit scripts and cheap martingale scripts that you see in the market and could result in losing all your money at once. That being said, the chance is none-zero strictly statistically speaking. But the bot plays a tight bankroll and won't play with more than 1-2% of ur bankroll in each round (each round itself is consist of a few dozen of bets) and it is highly unlikely that you lose many rounds in a row ...

rogerand19 - September 22, 2019, 3:07 am

1. during the 24 hours of running the bot how much or what % profit i can make?

2. when you say winning is not 100% guaranteed, does it mean its possible that i can lose my whole balance?

BlackXPearL - September 22, 2019, 3:26 am

(Sep 22, 2019 03:07 AM)rogerand19 Wrote: [\[CITE\]](#) 1. during the 24 hours of running the bot how much or what % profit i can make?

to get ur answers please read the faq in the original post and answers to previous posts above.

Goals - September 23, 2019, 2:11 pm

Looks interesting but would like more info. I'm confused. How can you use AI to predict a dice roll which is randomly generated by another computer unless you knew the method the gambling website was using to generate the random number. The probability of rolling above or below 50 is still 0.5? Even if your bot remembers the last 50 rolls. Is there more to this AI? Or is it just remembering the last 50 rolls and based on that, if it sees there are more below 50's rolls it selects

above 50 for the next roll?

rogerand19 - *October 10, 2019, 12:14 am*

is this still available?

which gambling site we are using?
