Thread: [Modified Transceivers! HiJack a Drive Thru! | %50 OFF! | \\$250 | Preorder Now!](#)

Venture - September 19, 2019, 5:29 pm

[Video: <https://www.youtube.com/watch?v=olv9oW2KK6A>]

As whats gone over in this video the people are using a modified transceiver to jack with their mcdonalds drive thru, you can put these together yourself; however the procedure is rather time consuming, requires technical details; and you need to understand what components are compatible with what. If you want to skip the bullshit; my regular msrp is \$500, a majority of the materials are ordered, and I only use high quality parts, as far as I'm aware radios like these are not readily available; and cannot be bought right off the shelf. The first 12 people to place a preorder will receive a %50 discount for a price of \$250; the truth is I will only ever be making 12 of these for hackforums. To Place an order, start a contract; And PM me to move forward be sure to pay attention to contract details; you will be given a form for shipping information to fill out, for privacy reasons I recommend using a reship service; Shipping is worldwide where there are no United States prohibitions to ship. Orders close sunday, spots after that will not be reserved, nor will new orders be accepted; All orders are expected to be done, and shipped within 2 weeks after the final deadline which is sunday. Individual shipping times may apply. We may offer customized solutions, such as radio type among a few models; We will publish a list to those who place their order, in which you can customize your order; It may be possible to use cheaper parts/radios, and include 2 for the price of one, this will be limited to the first 6 orders. Hurry before this deal ends.
[contract=tid]Place your order now! You don't want to miss out![/contract]

Pretty cool man, I would probably just build one myself if I was interested. I enjoy soldiering and building low-fi synths and sound circuits like the atari punk etc.

Then you'd fare easy on it; I think they published an article some years ago. ?

I'm still taking orders hurry before the deadline; it won't last long; you could resell these for booku bucks

ReduxJS - September 20, 2019, 11:11 am

That's pretty funny lol. GLWS man.
