Thread: [ionCube decode](#)

Alaa Hussein - September 22, 2019, 7:27 am

Hi guys.

I need decode 2 file. Anyone can help me?

Files : ufile.io/ab10dl96

Unfortunately I do not know Ioncube version ?

Thanks for your help.

Le-coyote - September 23, 2019, 6:00 am

A Simple search on google....

Direct links of the file decode

[UnPHP - PHP Decode of](#)
[UnPHP - PHP Decode of](#)

Check part of decoded files:

PHP Code

```
<?php
```

```
// decoded by phpdecode.xyz
```

```
if (!function_exists("isArrayEmpty")) {  
    function isArrayEmpty($arr, $k)  
    {  
        if (is_array($arr)) {  
            }  
        }  
    }  
}
```

```

    if (is_array($arr)) {
        for ($i = 0; $i <= count($arr); $i++) {
            if (!empty($arr[$i][$k]) || $arr[$i][$k] != NULL || $arr[$i][$k] != "") {
                return true;
            }
        }
        return false;
    }
}

function getNameServer()
{
    if (!empty($embeders)) {
        $active = "active";
        if (!empty($embeder["code"])) {
            $embederName = !empty($embeder["name_server"]) ? $embeder["name_server"] :
"????? ????????";
            echo "<li class=\"\" . $active . \"\" id=\"s_\" . $key . \"\" onClick=\"getServer(this.id,\" . $key .
\");\"> <i class=\"fa fa-video-camera\"></i> \" . $embederName . \"</li>\";
            $active = false;
        }
    }
}

function checkServerEmpty($server)
{
    if (!empty($server)) {
        return true;
    }
    return false;
}

function deleteDir($path)
{
    $files = glob(preg_replace("/(\\*|\\?|\\[\\])/","[\\$1]", $path) . "{,.*}", GLOB_BRACE);
    foreach ($files as $file) {
        if ($file == $path . "/" || $file == $path . "/..") {
            continue;
        }
        is_dir($file);
        is_dir($file) ? deleteDir($file) : unlink($file);
    }
    @rmdir($path);
}

```
