Thread: [Looking for beta testers, Hex Crypt pre release.](#)

Skeetz - September 24, 2019, 3:25 pm

Looking for some people that have the know-how to run a working remote administration tool, keylogger, or etc & would like to take part in a pre release test for a product that im currently working on. If you're intrested in participating then feel free to post here. I will only be accepting 15 members so those with greater knowledge of how to rat, crypt, keylog, etc will be first priority.

Please post with the following information.

Experience - mths / yrs total & in what category (rats / keyloggers / etc.)

How would you benefit the project? -

Do you have any coding experience?

Are you good with vb.net debuggers & / or cracking applications? -

I will choose three people out of the 15 to recieve a 1 year free access to the product when completed. the three people chosen will be decided by what they provide for the project. Im looking for people to both provide information towards what bins my stub currently works with & which bins it does not work with, Also looking for people to aptempt to crack my application or provide me with some information on how they were either able to bypass my login system & sucessfully complie a working bin.

Application information relevant to debuggers.

Client for users to use - Vb.net

pre release stub - Vb.net, Soon will be vb.net, c#, and native.

This projects server / client system is fresh and may very well have loopholes that im not aware of, looking forward to talking to some other users that have experience in the same area. Thanks.

Takehito Morokuzu - September 24, 2019, 3:43 pm

Experience - 2 - 3 years, don't really use them anymore but I know how to use and test a RAT and crypter

How would you benefit the project? - I have several virtual machines that I can test scantime + runtime detections, I can try to find bugs and any improvements I think can be made

Do you have any coding experience? - a bit but not enough for a crypter

Are you good with vb.net debuggers & / or cracking applications? - nah sorry

Experienced reverse engineer. Both native and managed. Would love to take a peek at the stub.

nascoman - September 26, 2019, 4:47 am

I need a 100% unique and 100% FUD exploit and crypter made only for me (that I plan on keeping strictly private and never share with anyone to make sure it remains FUD.

Budget \$30-350 USD please stay away if you know what you going to provide to me won't work. And I want a life time business deal.
