Thread: [OTR-HF | Native Cryptography Expert | FUD Scan Time | Need Runtime Scanner](#)

OTR-HF - September 25, 2019, 8:39 am

Hello everyone.

I'm OTR-HF and I'm seeking funding for a cryptography business.

Feel free to read my Introductory thread in Introductions, with some more information on myself.

I specialize in all sorts of executable obfuscation and encryption. Including but not limited to:

Polymorphic Encryption and Obfuscation Algorithms

Native FUD C++ Runtime Injection, Startup & Persistence

Fully Private Anti-Hooking Methods, of bypassing Behavior Detection.

I'm hoping for an investment of around \$100-300 which would fund mainly RunTime Scans on DynCheck, Ranks for HF, advertisement, secure VPS's and tools needed to test obfuscation and encryption against decompilation.

Should be paid back within a month or so depending on how successful it is. Also, as the investor of the project, you will have part decisions in the project, on prices, availability etc. Until the money plus your fee has been paid back. I feel 20% on top of the amount borrowed is fair.

Now of course I wouldn't be asking for this without proof.

Here's a Scantime result from today:

antiscan.me/scan/new/result?id=b3UN2Tli1YpO

and I'm also going to be offering a free crypting service, for all potential investors, to test my file stability, runtime and quality.

Feel free to contact me on XMPP or by Protonmail:
