Thread: [~ Gmail PVA Creator \(Version 2.2 - March 30, 2021 \) ~](#)

? Heisenberg ? - September 28, 2019, 6:34 am

Just a reminder that we open sales rarely for new customers due to huge traffic in customers. We have a waitlist which users can join on our website, but due to rules in HF, I can't post website link. So I will be posting here, everytime license are restocked, so anyone wanting to buy can start a contract then.

F.A.Q

What makes this Bot unique?

We have combined multiple techniques that obfuscate uniquely identifiable information for both your computer and browser to prevent websites from being able to identify you, your browser, and your computer. The bot has been designed to mimic human web browsing behaviour when navigating through the sites, clicking and typing..

What modes of payment do you take?

We accept Crypto (BTC, LTC and DASH), Stripe (credit cards) and Payeer as payment options. Your license will be automatically generated and emailed to you after payment. In case you used Crypto it will be send after 1 confirmation.

How do I get the bot after making the payment?

An automated email will be sent out when the license is generated containing both the license and download link.

Can I use the license key on different systems?

The key will be locked at the time of activation to the first computer you use it on. In the event you need to move it to another computer, you can contact us to reset the lock.

Can I run the bot on Mac or Linux?

Unfortunately the bot is designed to run on Windows. You could use VirtualBox on Linux or Mac to run it in there, or if you are a Mac user you can try Parallels. You could also run the bot on a VPS, it doesn't need much resources.

Does the quality of the proxy matter?

Yes the quality of proxies matter. Expensive proxies does not mean good for google. Even the cheapest of proxies will work good as long as they are not abused in the eyes of google. Best not to use low quality proxies or public/free proxies which are highly abused. With that said if you have good HQ proxies, they work like gold. Lastly, the bot can be used without any proxies, but that limits amount of accounts you can create in a short time span.

I am facing some issues with the bot, how can support help me?

We have a private discord support channel dedicated for all the customers.

I need a particular feature to be added to the bot, can it be done?

On our support discord, we have a room dedicated to end user suggestions and we always try our best to put them at a higher priority than our other requests.

Refund Policy

Due to the nature of the product (digital), We do not offer refunds - unless Gmail PVA Creator is not working.

However, if a customer has issues that cannot be resolved (with an update) and the customer provides a video showing exactly what is wrong and the bot not working then a refund may be considered.

I've had the opportunity to test out the program as I'd received a vouch copy from OP, and I am very impressed!

Not only is it stable and reliable, it managed to do everything within a timely manner. I haven't seen anything like it that works like this one does, and that's not even including the speed of the proces.

I can definitely recommend this to anyone looking for a decent gmail creator, but of course I'd encourage everyone to try it out for themselves.

One thing I would like to mention is that it's vital that you use good proxies when using the program. With public ones results will be worse. This should be obvious though, as it's mentioned several times in the OP of this thread.

Good luck with your sales Heisenberg!

(Oct 2, 2019 03:36 PM)Geass Wrote: [\[CITE\]](#) How many accounts it can create in one hour?

Edit: with good proxies

With proper proxies, you can go at 10 browsers at a time. But I always like to go with fewer browsers (No particular reason)

But proxies are everything. We will soon have an update on an in-depth proxy quality check.

We have added enough wait times (not too long) between each step so that it can mimic human behavior. The time is taken for account creation also depends on time taken for SMS code to arrive. But usually, it's quite fast and tries to mimic human behavior.

Bot saves entire profile and each account can be opened inside the bot using same profile.

The session will always be open until you choose to delete it.

Bought this and had some issues at first but got help and everything works fine. Just have some
patience and do as instructed and you will be making bulk gmails in no time at all. I was literally able
to load everything up and leave it running while I slept to come back to bulk account.

I cant say thank you enough for the help I got. most would just be very vague and then ignore you
but Heisenberg contacted me and helped me with EVERY issue I was having and even got on
teamviewer to show me exactly what to do. I mention this Teamviewer thing because there was one
part I was doing wrong and didnt even know it. I could have kept messing up and they would be
none the wiser. I am very happy about this product. He even offered some advice for using these
with another program I have in order to make even that program run better as well.

as seems cool tool but after it makes login i feel is where issues arise as if you on different ip then when made every login is gonna ask for sms and having to use many different phone numbers would seem to be a pain. as guessing you need the tool open to get access to the sms at anytime u need to login to a specific account.

Not really. It's just a feature of bot to save profile and help people open Gmails using same session data till they need.

saves the pain for users to create "portable Browsers" for each Gmail and set same IP for each Gmail everytime.

You can use Gmail as you feel like outside.

Except that, we provide everything else. We can't suggest proxy provider, as it will lead to them getting flagged.

So best if users user different provider themselves.

Even DC proxies if they are HQ work well. Many use them.

gex231 - January 21, 2020, 8:24 pm

So, I've had the PVA creator for a little over 2 days now.

So far I have made a little over 300 accounts! This thing is a beast, I use 3 browsers at the same time and I get 1 account per minute roughly. If you want a lot of gmail accounts then this is it.

I'm running this on my 4 year old laptop that has 4GB RAM and a pretty shit CPU, but it handles 3 browsers without a hitch. Never goes over 40% CPU usage!

The best part about this is it saves the browser profile with proxy, so when you want to test the account, you can just right click and open it.

Highly recommended product for anyone looking to get a lot of gmail accounts. The best one I've seen thus far. I've also tested some of the other programs Heisenberg has to offer and they're all top quality products, seriously amazing coding on his part.

Thanks again, your programming is amazing! <3

Hey OP, The recovery email template how does that work, is it using temp email auto or we have to import our own temp emails?

(Mar 9, 2020 08:52 AM)Lextian Wrote: [\[CITE\]](#) Hey OP, The recovery email template how does that work, is it using temp email auto or we have to import our own temp emails?

You can use the recovery email templates to randomly generate email addresses, in case you got catch all domains you want to use.

But you can also import your own list if you want.

It's so nice to see you are still developing this tool, and updating it so frequently. A lot of sellers can take a good example on this. Keep it up buddy! So nice to see you are actively developing this, and setting yourself apart from a huge part of the community! Huge vouch for this.

I will maybe buy it. But is there already an update which included the forward email?

Forwarding needs lot of testing else may lead to accounts getting clipped.
We are working on it now.

Send/read emails, etc using accounts created.

All account created have a saved profile inside the bot.
So you can login to the accounts in one click with same cookies and other data used while creating account.

This would allow me to create multiple (many, as in about 50 - 75+) Gmail accounts under the same IP address right?

PVA accounts are better of course but I'm more so looking just to be able to create a ton of emails for different usernames I'm going to be creating that will need an email to be linked to.

You can create them , but all accounts would be clipped/flagged right away. Bot just mimics human. No other super power.

Same like human created accounts.

V.V.V.V.V - May 23, 2020, 2:22 pm

Where to start, that's probably the question.

Lets start by saying that this PVA creator is absolutely incredible!

Have not had any problems with this product and the success rate is very high.

Everything is well described and you can not fail if you follow the steps in the private discord. If you have any questions, just ask staff for help and they will answer you no matter how "stupid" question you think it is.

So my vouch really goes for this and if you know what you are doing I can promise you that you can make incredible amounts of money on this product. I myself have already made more in 7 days so I could pay for this for over 12 months without any problems. As soon as I receive my payment, I will renew this for at least another 3 months if there is no hidden "lifetime" plan.

Really really recommend this! I see this as "autopilot" gmail creator.

Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

License is restocked once in a while. We have a waitlist position in our website where new members are added to queue. Unfortunately due to contract system in HF, I can't add the website. So everytime there is a restock, I make a post here, so keep in look out for that. If you are on our discord, you can also follow there. But always create a contract before buying even after restock.

Regarding proxy, we have tons of docs in private channels where we give pathway on how to use bot. Initial 2-3 days are testing period where user will learn to understand how good his proxy is. Based on that you can know how many you can create.

F.A.Q

What makes this Bot unique?

We have combined multiple techniques that obfuscate uniquely identifiable information for both your computer and browser to prevent websites from being able to identify you, your browser, and your computer. The bot has been designed to mimic human web browsing behaviour when navigating through the sites, clicking and typing..

What modes of payment do you take?

We accept Crypto (BTC, LTC and DASH), Stripe (credit cards) and Payeer as payment options. Your license will be automatically generated and emailed to you after payment. In case you used Crypto it will be send after 1 confirmation.

How do I get the bot after making the payment?

An automated email will be sent out when the license is generated containing both the license and download link.

Can I use the license key on different systems?

The key will be locked at the time of activation to the first computer you use it on. In the event you need to move it to another computer, you can contact us to reset the lock.

Can I run the bot on Mac or Linux?

Unfortunately the bot is designed to run on Windows. You could use VirtualBox on Linux or Mac to run it in there, or if you are a Mac user you can try Parallels. You could also run the bot on a VPS, it doesn't need much resources.

Does the quality of the proxy matter?

Yes the quality of proxies matter. Expensive proxies does not mean good for google. Even the cheapest of proxies will work good as long as they are not abused in the eyes of google. Best not to use low quality proxies or public/free proxies which are highly abused. With that said if you have good HQ proxies, they work like gold. Lastly, the bot can be used without any proxies, but that limits amount of accounts you can create in a short time span.

I am facing some issues with the bot, how can support help me?

We have a private discord support channel dedicated for all the customers.

I need a particular feature to be added to the bot, can it be done?

On our support discord, we have a room dedicated to end user suggestions and we always try our best to put them at a higher priority than our other requests.

Refund Policy

Due to the nature of the product (digital), We do not offer refunds - unless Gmail PVA Creator is not working.

However, if a customer has issues that cannot be resolved (with an update) and the customer provides a video showing exactly what is wrong and the bot not working then a refund may be considered.

I had a subscription to this a few months back - got to say the software is well built, runs smooth.
Definitely a solid developer.

Multiple reasons.

Most people who provided legitimate services trust gmail accounts over any other since it is a huge pain in the ass generating them. They know that to generate fake gmail account you need to create a program to fill in the gmail accounts, which is a not so hard but a huge hassle that majority wont go through. A shit ton of private residential proxies, phone authentication services ect.

Thats usually why you see main stream services give you the option to sign in with your google account. Extremely helpful when you are botting.

Another example would be the use with Nike raffles. Its common knowledge that people who enter a raffle whos account is tied to a Gmail account gets priority over those who enter with a random domain.

OP; I am assuming since you are able to generate that many accounts on such a level you are not using 5sim or a main stream SIM provider? That's what really has my interest.
