Thread: [Phishing Pages](#)

Pulpmis - October 2, 2019, 11:27 am

Can a phishing page be used to log IP addresses in addition to collecting submitted information?

SoulZeh - October 2, 2019, 11:37 am

You're posting in the incorrect section if you're asking about Phishing pages, if you're interested you can look here: [Beginner Hacking](#)

However if you've been logged by a Phishing page, they will most likely have IP addresses and all passwords you've typed in.

Pulpmis - October 2, 2019, 11:49 am

Thank you. That's where I started posting.

Anurag Agarwal - October 2, 2019, 6:20 pm

The writer of the earlier post is extremely sorry for his rude behavior

tux1 - October 3, 2019, 11:58 am

Yes, this can be easily done with a single lines of php code.

Ramb0x - October 3, 2019, 12:02 pm

PHP Code

```
<?php
function getUserIpAddr(){
    if(!empty($_SERVER['HTTP_CLIENT_IP'])){
        //ip from share internet
        $ip = $_SERVER['HTTP_CLIENT_IP'];
    }elseif(!empty($_SERVER['HTTP_X_FORWARDED_FOR'])){
        //ip pass from proxy
        $ip = $_SERVER['HTTP_X_FORWARDED_FOR'];
    }else{
        $ip = $_SERVER['REMOTE_ADDR'];
    }
    return $ip;
}
```

```
echo 'User Real IP - '.getUserIpAddr();
?>
```

You can get the ip with this more complex function or with the single line.

You can get the ip with this more complex function or with the single line.
Wow, I didn't think it was so simple. I'm still trying to learn the syntax for C.

That is more complex than needed.....

You can get an IP just by an image hosted on a webserver. no need to code anything that is overkill.

faxxgrid - October 4, 2019, 3:08 pm

Hello mates where is the best vps host to use in hosting stmp server
