Thread: [\[FREE\] LimeBase64 Converter v0.1](#)

NYANxCAT - October 2, 2019, 9:27 pm

LimeBase64 Converter v0.1

This will come handy when trying to create PowerShell/VBS stub.

[Download](#) | [Preview](#)

CyberStrike - October 2, 2019, 11:46 pm

Good stuff as always, often in the past I have seen malware in powershell scripts where in all the values are converted to base64.

Cooooool - October 2, 2019, 11:52 pm

Great release! It's always awesome to see you on the forums.

Suggestion:

In the next update have an option to turn word-wrap off.

Bunnyslippers69 - October 2, 2019, 11:53 pm

I'd just finished making something similar a few days before this post although i imagine yours performs better anyway

learner319 - October 3, 2019, 6:29 pm

I feel very happy to see your amazing works.You are my hero.Love and respect brother <3 <3 <3

DroneDev85 - October 4, 2019, 6:26 pm

Thank You, great work as always!

Just Net or Native also ?

H4x10r - October 11, 2019, 2:28 pm

(Oct 11, 2019 02:15 PM)MOHX Wrote: [\[CITE\]](#) I don't think it matters lol it'll just convert the file to base64.

I made a similar tool while ago in Delphi :3

Would you share the code #?

MavenGradle - October 14, 2019, 2:04 pm

I don't really know why people make these into executables? You can easily do this website based, like so:

<https://hackforums.net/tools.php?action=base64>

<https://mvngradle.net/tools/base64>

Without the potential of running into an infection by executing unlicensed or unchecked code directly on your machine and with the functionality being available across any device that has a webbrowser. Not saying your software is infected.

MavenGradle - October 14, 2019, 4:23 pm

(Oct 14, 2019 02:19 PM)M0HX Wrote: [\[CITE\]](#) It's much easier and faster to convert in executable than on web, and sometimes pages can't handle big ass files.

<https://i.imgur.com/rwGQEkO.png>

with an executable, it'll be much faster to convert those bytes to b64.

<https://i.imgur.com/QyvJ8SJ.gif>

again you can always make ur own its just base64.Omniscient or Xerotic set that as the limit because calculating hashes for large files is an expensive operation and understandably so, they'd like to keep their servers doing more important work.

Mine, however, is not being done server-side and as such file size is not limited (except by the machine that's running it):

<https://mvngradle.net/tools/base64>

Now granted, this will not work as smooth as a native executable due to browser and JavaScript performance limitations, it's still a viable option that works on a multitude of devices, including my [fridge](#).

Do you really think that Nyan Cat will try to infect some random computers with these skills bruh ?

MavenGradle - October 15, 2019, 10:52 am

Please read that last line you yourself quoted. The answer to your question is right there. In some cases, people have to read it a couple of times before it sinks in. Thank you for taking your time to do so. If required, I'll happily post another response which breaks down those words for you.

Skofos - October 17, 2019, 7:17 am

Nice projects that u Made m8

wrapmycode - November 28, 2019, 9:21 pm

Thank you for sharing this.

TodorSubev - November 30, 2019, 11:10 am

Thank you, perfect work dude!

Stanley - June 13, 2020, 4:05 am

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
