Thread: [Man in the middle wifi hack](#)

?ch?m?ll?? - October 6, 2019, 4:52 pm

So Quick question, I had this idea of changing my Wifi SSID to target SSID and get a target SSID user to try to connect to my falsified SSID and grab the password it tries to connect with. Is this possible in anyway? I have a feeling it my be but just some extra info my be needed to get it to work.

Yeah, that's called Evil Twin Attack. Once you create an AP and host a captive portal, you have to deauthetinticate all the clients from the original AP so they can try to connect with yours.

Trying using fluxion (you can find it on github, repo by FluxionNetwork) a ready to go script for MITM WPA attacks.
