Thread: [RDP Cracking/Exploit Mentorship 10-30 RDP daily](#)

Caraxes - October 8, 2019, 4:31 pm

Hello my dudu's I'm here to offer a good opportunity to start your RDP cracking/exploiting bussines maybe for your personal use or sell those is up to you!

First of all I'm going to be clear I'm not going to lie talking about private exploits or shit like that, we are going to work with public software/exploits but you will get results!

FAQ's

Q: Why I should buy your mentorship if you are using public shit!

A: Because you are going to get results!

Q: What Exploit/Software are we going to use?

A: Sticky Keys Slayer, z668, Masscan, Network Scanner V2 (useful to mount network drives)

Q: Are those RDP with Administrators Rights?

A: A bunch of those you will have admin rights, the ones with users rights you can use a simple software to create users with admin rights!

Q: Which countries are we going to target?

A: You can target any country you want, but keep in mind that tier 1 countries like USA, UK, Canada are most difficult because most of the people try to target those!

Q: What do I need to start?

A: If you want to combine both methods you will need a Kali Linux server (recommended) or VM if you have good spec's and internet speed and a windows server 2012 it would be the best! (I can recommend the one I use)

Today's results

I will install and setup everything for you, I will spoon feed you until you don't need my help anymore!

People think Sticky Keys is dead wrong, just need to make some changes on the way you work with that exploit!

If you have any other questions just shoot!

No VC available sorry!

Im not selling the exploits im selling my mentorship, go try your way using
<https://www.countryipblocks.net/acl.php> 15-20 days old cidr and 3389 port! You might get some results lel

BTW I got muted and 2 warning's trying to expose benman who claim's that he's selling private shit when the only thing he do was change stickykeys name to boot.sh and use xdedic scanner i know for a contract customer of him who i was talking!

I understand that you are only selling a mentoring and not exploits

But if it was public how to change sticky keys the way you teach your clients to change it, in order to crack RDPs, why wouldn't you just share it?

Like that sounds, as if you were selling something like a semi private exploit

Money- - January 1, 2021, 10:37 pm

I wonder where does that Benman guy went. Never bother checking his profile.

Sticky keys still working until now? Just wondering. My last try was in March 2018.
