We are the first, our first release in beta was december.

Our system is provably fair, we use random.org after the round has been generated and furthermore, your "provably fair" method isn't even fair!

cryp - October 11, 2019, 9:38 pm

Someone wanna come coinflip?

Ok fair enough.

But your site rely's on 3rd party software so if random.org will go offline you guys won't be able to run your bets.. ?

Could you explain to me why our provably fair method isn't fair? ?

mahmud1 - October 16, 2019, 10:43 am

Basically a CS:GO gambling website with Bitcoin.

I hope you can grow this to be a nice platform to gamble on :)

Kill Joy - November 2, 2019, 6:04 am

Your links do not work. Might want to update them.

Is it open source?

If not then how would we know that it's valid

Doesn't have to be open source to be provably fair?

Please read our RNG page i have send you a PM.

If you have any questions ask me! :)

I'll read it shortly but essentially it does, because we would have to take your word that the hash provided is one of two hashes (that's if you're generating it per person that is).

I could very much just as easily create a function that can be altered but still provide the same result.

The only way one could determine if it was truly random would be via viewing the function (to ensure no interference) and viewing the result.

Otherwise we just have to take your word for it, which many won't.

I see you incite the customers to use external validation, my concerns are now null.

DrRespect - November 5, 2019, 3:19 pm

This looks sick, although I'd like there to be higher wagers.

MakBTC - December 22, 2019, 4:28 am

We have now officially launched!
