Thread: [Crypter for Metasploit/msfvenom payloads??](#)

buy btc - October 11, 2019, 12:28 am

Sorry for this Noob question but..

Is there any crypter for Metasploit executable payloads?

Before i always was using Veil-framework to create fud payloads for metasploit, but nothing fud anymore since long time

Thanks

[\[FREE\] Online Native Semi-Polymorphic Crypter | https://crypter.design/](#)

they should work.

I'll work on better results soon. and v4 maybe this or next week.

v1 is working but after i got a session it was detected by windows defender in runtime.

v2 is not working. The .exe won't start/connect to my handler :(

go with v1 and check your acting with the session

u get the problems with meterpreter detection because you are too noisy !

the calls you are making are detected by the defender

also post the decetion itself the next time plase , there will be something like meterpreter behav or so

then you know why you got flagged

use the session and do the rest over powershell

or empire

or switch to empire

I can not interact with the session. It get closed few seconds after i got it

then its crypter related

i am able to crypt 32 peters and they get a session and you can do some stuff
but if you do something like download execute
the execute works but meterpreter will be lost ...

there are some restrictions , they know the footprint from meterpreter itself ...
