Thread: [how to hack forgot router password?](#)

jeeje009 - October 12, 2019, 1:10 pm

Is there anyway to bruteforce my pw?

Renowned - October 12, 2019, 1:14 pm

You don't need to pretend you're trying to get in to your own here bud. Is it your neighbour fr?

jeeje009 - October 12, 2019, 1:16 pm

who can help me? message me.

Rogers Communications - October 12, 2019, 7:19 pm

just reset the router! otherwise nobody believe you!!!!!!

Yac1ne - October 13, 2019, 12:19 am

There's a tiny button you can find on the the back or bellow your router , use a needle in order to press it and hold it down for a little while , the router should then restore its factory settings

kpown - October 14, 2019, 7:36 pm

I am just gunna assume its your neighbor because if its not, then youre brain dead

Now, first step would be to see what type of security they are running (WEP, WPA, WPA2..etc). an easy airodump-ng (interface) command on kali Linux will give us that information quickly

The next step would be to see what router they are using. Below is a nice and easy tutorial you can follow in order to do that

<https://miloserdov.org/?p=306>

There are a number of powerful automated tools that can get the job done... why work hard? its 2019

learn how to use wifite and/or aircrack-ng for starters. If the target AP is using WEP then youll probably get the creds in minutes. If they are using WPA2 then youll probably need to capture a handshake when there is a client online. Wifite can do this for you but make sure there is a client or two online when you do this. Once you get the handshake you can crack it yourself if you have decent computing power and learn how to use hashcat, or you can submit the handshake to the HF hash cracking services here. They will do it for you.

noyoureatowel - October 16, 2019, 10:27 am

that wasn't even a good attempt to con it off as his own...

conradxen - October 17, 2019, 7:00 am

Or you could sneak up to your neighbors front window ... er i mean your front window ;) , and see if you can see the back of the router (dont know why so many people put their router there)

Ive seen a fair few ?

I think people like to see the flashy lights

That's ridiculous, probably better reception than in my attic though..

On topic:

First try all the default passwords, if it is your own just reset the router...

If it's your neighbours, go and bruteforce it. There's tons of tuts on HF about this.

RahatTepe - October 28, 2019, 8:27 pm

Link to HF service? PM would be ideal :) thx

Solar_Flare - October 28, 2019, 10:55 pm

Trolls. Wheres the community support?/!/?

Hint,

Wpa2 wordlist rainbow tables? whos got the 30gigs wordlist I can download from?? PM the link..
