Thread: [How to binding File EXE in Document File \(JPEG, DOC, PDF, PNG \)](#)

N-gative - October 15, 2019, 4:37 am

hello all that is here ... I get a little problem in the file binding problem, I want the nc.exe command to open the path to the server that is listening, and then I control from my public network, but I need a file to disguise, like open JPEG, DOC, DOCX etc and maybe PDF files can I start the discussion?

Kayfox - October 15, 2019, 5:24 am

you can't BIND to any non exe file
but there are exploits and stuff for this
don't ask me "where" I don't know

I agree with Kayfox. There's not much you can do to bind an exe with jpeg or vice versa without the final file being an exe too.. Unless you have an exploit of some sort. ?

You cant physically bind the .exe to a word file or Jpeg etc...

You can however utilise Macro exploits, This works when someone opens an office file and click enable content is downloads and executes the .exe file silently.

This is widely available in the market section.

Second, There is a method utilised by MLNK (Available in the market section by Quismon) where it uses a shortcut exploit to make a seemingly harmless .jpeg.lnk (But with a jpeg icon and characteristics) launch your payload and stub silently upon it being clicked.

Feel free to PM me if you need any help.

thanks for the information, and I will try to exploit the file

I understand that, and I want to ask if I can code with C ++ to run files with certain extensions that make my EXE work?

But the exploit market is really down .. most macro exploit can't execute well on windows 8- 10 system .. and can't inbox 2016 office 360.. so what is the best way to hide an Exe file And spread to see results ??

It will cost money though. The price depends on the exploit.

OP if you have a brain don't do this

this right here screams "scammer 101"

what do you mean by your silly insinuation ?

how the foolish you read it and take it scream scam ?
