Thread: [\[FIFA 20\] - OCTOFUT - BEST CLOUD BASED FIFA 20 BOT](#)

Religious - October 16, 2019, 6:32 am

INTRODUCTION:

Octofut is a cloud botting platform for FIFA ultimate team. It used to be utilized privately by professional botters/coin sellers in the previous years and became public since 2019.

During these years, the safety and the reliability of the platform continued to increase to offer you top quality services.

FEATURES:

Cloud Service: This is probably the differentiating element compared to other bots. Because it is a cloud service, you can access your account from any device, and do not need to leave your computer on. Everything happens on our servers.

Powerful AI: All accounts in octofut are connected to a cooperative, neuronal network. Using this advantage will boost your accounts efficiency to the max.

High Configurability: You will be able to configure every aspect of your bot inside a smooth ergonomic interface.

Captcha Solving: The bots are able to automatically and accurately solve captchas when they're triggered, avoiding any risk of bot detection.

Coin Transferring: Octofut meets up industrial standards and makes it very easy to send coins (to your friends or your customers)

Coin Selling: If your aim is to gain real-life money, you can use Octofut to earn coins and sell (automatically) them to professional coin sellers. we're able to connect to a vast variety of external selling APIs.

Helpful community: In 2019, a nice community has been built in Discord to discuss the platform, deals, tips, etc...

PRICING:

Octofut follows the cloud services standard: paying as you go. We have our own currency: Octofutiums, which is consumed as long as the bot is running.

To get more octofutiums, you can buy packs, on which discounts are applied from time to time. This pricing is much more advantageous than those of other bots.

Thank for the introduction of this site. I've never known that FIFA Ultimate can be botting.
Hope this site will stay for long.
