Thread: [Anubis 2.5 botnet setup](#)

urfinish5 - October 17, 2019, 3:45 am

Hello 2 all ,

I have just a question that , I have cracked source of Anubis 2.5 bot ,
I set panel , it's working fine..

Then , with using Android studio , I set apk url in constant.php ,
I get contacts, intercept sms , app installed ,

But
Somehow , when I add command , keylogger , within 4-5 seconds I get keylogger.txt blank file ..???
no typed keystroke captured ..

So , what I miss ? How I config keylogger code ..??

Can anybody help plz..
It will be pleasure ..

Note: I want to use it for legal purpose and for prank to close friends only..

Cooooool - October 18, 2019, 6:57 pm

Ah yes, the classic using a botnet for legal purposes and close friends. Why do you need a keylogger for pranking close friends though? ? ?

Bro ,
I already made windows keylogger using vb.net with email and ftp functionality ..

It's quite easy for computer...

So, as u are confused...LOL....

I just wanna learn some Android based functionality..

Just expand your scenario to 360°

If you can help me , then it will be pleasure..

And if no... Don't be judge plz...

Tq..

Did you actually just insult me and ask for help in the same sentence? Quite impressive I must say.

Go into the botnet section, not the RAT section.

chinees2 - October 20, 2019, 10:37 am

urfinish5 please contact me through pm urgent.

Here all r same bro ,

It's not insulting , it's to inform you that , don't be a judge...

And if u have ego , then it's ur fault,

Just chill bro...

C'mon man, why bust his balls? ?

urfinish5 - November 11, 2019, 9:56 pm

I got logger function working, not in fine way , Java vs php file (fafa.php) became unstable I think so..

Anubis botnet update

Elite Neter - January 5, 2020, 8:53 am

guy what does tag mean what should i fill it on this text just to make sure that am right before

recompile

The same folder, c.smali file 83 and line 87 - indicate the tag. Well, which is visible in the admin panel.

here the sources

```
const-string v1, "zanubis"  
iput-object v1, p0, Lwocwvy/czyxoxmbauu/slsa/c;->h:Ljava/lang/String;
```

```
line83  :  
const-string v1, "tag" <---- what should i fill /admin(dir url or what)  
iput-object v1, p0, Lwocwvy/czyxoxmbauu/slsa/c;->i:Ljava/lang/String;
```

```
line87  :  
const-string v1, "tag" <---- what should i fill /admin(dir url or what)  
iput-object v1, p0, Lwocwvy/czyxoxmbauu/slsa/c;->j:Ljava/lang/String;  
is there any still ve dendroid apk just the apk for decompile/recompile the worked one? just curious  
what is wrong with those BN :D
```

urfinish5 - January 14, 2020, 8:06 am

tag means nothing , don't worry bro ,
U can give any name ,it's just an identifier of perticular bot ,

Crypt key should be same as you gave in panel config.php ,
By d way, in Android pie or above it's not working , specially sms intercept..

Anyone has crack code of shopper Trojan ?

dianabond - February 25, 2020, 5:28 am

hey man i think i can help contact me on icq @brianvakas

I know im nearly 4 months too late but the better question is why he needs creditcard stealing malware for a prank

urfinish5 - May 31, 2020, 9:37 am

New mod version works well ,
For all ur confusion , I wanna say ,
Focus on target not in gossip which u can't understand.. think 360° :)
